L. Oliver, P. R. James, J. B. Jago, 1983 The fourth international symposium on Antarctic Earth Sciences took place in Adelaide South Australia during the week 16 20 August 1982 This volume contains a record of the centenary activities celebrating Sir Douglas Mawson and the one hundred and seventy four papers that were presented by delegates for discussion over the five days Sir Douglas Mawson was part of the first team to reach the magnetic South Pole a leading geologist and scientific figure during the heroic age of of antarctic exploration The papers presented during the symposium were divided into fifteen categories covering east and west Antarctica marine land and glacial geology plate tectonics islands peninsulas climatic change and Precambrian and Cenozoic era activity The two hundred persons from sixteen countries who attended the symposium brought together a wide range of the most current expertise and research to share of which this volume provides a record Carbon in Earth's Interior Craig E. Manning, Jung-Fu Lin, Wendy L. Mao, 2020-04-03 Carbon in Earth's fluid envelopes the atmosphere biosphere and hydrosphere plays a fundamental role in our planet's climate system and a central role in biology the environment and the economy of earth system. The source and original quantity of carbon in our planet is uncertain as are the identities and relative importance of early chemical processes associated with planetary differentiation Numerous lines of evidence point to the early and continuing exchange of substantial carbon between Earth's surface and its interior including diamonds carbon rich mantle derived magmas carbonate rocks in subduction zones and springs carrying deeply sourced carbon bearing gases. Thus there is little doubt that a substantial amount of carbon resides in our planet s interior Yet while we know it must be present carbon s forms transformations and movements at conditions relevant to the interiors of Earth and other planets remain uncertain and untapped Volume highlights include Reviews key general topics such as carbonate minerals the deep carbon cycle and carbon in magmas or fluids Describes new results at the frontiers of the field with presenting results on carbon in minerals melts and fluids at extreme conditions of planetary interiors Brings together emerging insights into carbon's forms

transformations and movements through study of the dynamics structure stability and reactivity of carbon based natural materials Reviews emerging new insights into the properties of allied substances that carry carbon into the rates of chemical and physical transformations and into the complex interactions between moving fluids magmas and rocks to the interiors of Earth and other planets Spans the various chemical redox states of carbon from reduced hydrocarbons to zero valent diamond and graphite to oxidized CO2 and carbonates Captures and synthesizes the exciting results of recent focused efforts in an emerging scientific discipline Reports advances over the last decade that have led to a major leap forward in our understanding of carbon science Compiles the range of methods that can be tapped tap from the deep carbon community which includes experimentalists first principles theorists thermodynamic modelers and geodynamicists Represents a reference point for future deep carbon science research Carbon in Planetary Interiors will be a valuable resource for researchers and students who study the Earth's interior The topics of this volume are interdisciplinary and therefore will be useful to professionals from a wide variety of fields in the Earth Sciences such as mineral physics petrology geochemistry experimentalists first principles theorists thermodynamics material science chemistry geophysics and geodynamics El-Hi textbooks in print R.
