Week	Unit and Topic	Item Completed
Operations and Algebraic Thinking Use the four operations with whole numbers to solve problems.		
1	Interpret a multiplication equation as comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 7 times as many as 7 and 7 times as many as 5. Represent word problems of multiplication comparisons as multiplication equations.	
2	Apply and extend prior multiplication skills to solve problems involving multiplication equations, e.g., for any two whole numbers a and b , solve for the unknown number in equations representing the problem, including multiplication comparisons from word problems.	
3-4	Add, subtract, and multiply whole and whole numbers and finding whole number answers using the four operations. Solving problems in which one or more of the numbers is unknown. Represent these problems using equations with a letter standing for the unknown quantity. Monitor the work situations of problems using mental computation and estimation strategies, including rounding.	
Number and Operations in Base Ten Understand place value understanding for multi-digit numbers.		
5-6	Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that 700 in 700 is ten times the value of 70 in 700.	
Number and Operations: Fractions Develop understanding of fraction equivalence and ordering.		
7	Explain why a fraction a/b is equivalent to a fraction c/d in terms of multiplying the numerator and denominator by the same number and use of the parts of the whole. For this purpose, compare and contrast equivalent fractions.

Curriculum and Students in Classrooms Walter S. Gershon, 2017-05-04 Curriculum and Students in Classrooms Everyday Urban Education in an Era of Standardization is a timely and thought provoking work that attends to often neglected aspects of schooling the everyday interactions between curriculum teachers and students Walter S Gershon addresses the bridge between the curriculum and the students the teachers and their everyday pedagogical decisions In doing so this book explores the students perspectives of their teachers the language arts curriculum at an urban elementary school and how the particular combination of curriculum and teaching work in tandem to narrow students academic and social possibilities and reproduce racial class and gender inequities as normal Recommended for scholars of education and curriculum studies

Faith-Based Education That Constructs HeeKap Lee, 2010-08-09 Constructivism is everywhere It is a hot issue at this time in the field of philosophy education technology and religion However can constructivism be an alternative approach in faith based education While some conclude that Jesus knew learning was an active knowledge creating process and that he always encouraged his disciples to think deeply and go beyond the surface level others would find that constructivism undercuts faith based education because of its claims to relativity For example constructivists claim that meaning is imposed on the world by us rather than existing in the world independently from us Thus they proclaim that truth is relative to particular times places and people Christians hold that truth does exist absolutely So how can there be a way forward for faith based educators who see the good in the constructivist approach In Faith Based Education that Constructs readers will find a unique approach whereby constructivism may appropriately be applied to a faith based education setting Although disagreement can occur between constructivism and faith based education this book concludes that constructivist thought and Christian faith based education are in the end congruent and harmonious in significant ways Those faith based educators who continue to hold cautionary views of radical constructivist assertions against absolute truths need not disregard all other aspects of constructivism Think Math!
