Practicum Module Main Engine (Steam & Gas Turbine) Amad Narto, Eha Vembriarta, Steam Turbine and Gas Turbine are machineries used to drive a gear reduction which is connected to a generator and propeller shaft. The steam produced by the boiler steam boiler in a closed vessel is either a water pipe or a fire pipe. Steam pressurized is high enough flows through a nozzle which is directed to the turbine blades so that it rotates into another form of energy to produce powers. Boilers are designed to transfer heat from a combustion source which is usually fuel combustion. A boiler is a connected vessel in which water is filled and heated so that water boils and evaporates continuously into steam. Steam generated from the boiler is used to rotate the steam turbine blades and rotate the shaft axle which is connected to the electric generator. The propeller shaft rotates compressor driver cargo pump on tankers. Mooring Winch and Winch lass movers and others. As for the gas turbine the combustion medium in the combustion chamber is gas. With a very high pressure it will rotate a low pressure turbine in which its rotation can be adjusted with a reduction gear and rotational speed regulator control which is often used for propulsion in aircraft and high speed ships. The operation of the Steam Turbine and Gas Turbine must comply with the operating standards that have been determined by regulations or safety laws. Therefore

the user of the steam turbine and gas turbine will have to meet the standard of the manufacturer who already has a production permit The standards made will ensure safety in operation thereby increasing the efficiency of the steam turbine while reducing the operating costs

and coal to predominantly oil and natural gas Thermal Power Plants use fuels for power generation Water is used for process

cooling as well as for service drinking requirement Chemicals are used for conditioning of water corrosion control and

sometimes for conditioning of fuel as well Lubricants are used for machinery These inputs generate waste products Human

related wastes sewage etc are also generated along with the processed waste These pollutants wastes need to be treated

before their disposal from the plants The treated effluents are required to meet the limits set by Central State Pollution

Control Boards The regulations issued by these agencies specify the maximum allowable limits applicable to the pollutants

discharge from the Power Plants This book is a serious effort that deals in detail with all the above issues and we are sure

that scientists academicians researchers and professionals who are constantly facing these issues and are striving to move

towards a zero emission regime will find this monograph a very useful reference tool on the topic Note T F does not sell or
