Software Reuse: Methods, Techniques, and Tools Jan Bosch, Charles Krueger, 2004-06-14 After three decades of research and practice reuse of existing software artefacts remains the most promising approach to decreasing effort for software development and evolution increasing quality of software artefacts and decreasing time to market of software products Over time we have seen impressive improvements in extra organizational reuse e g COTS as well as in intra organizational reuse e g software product families Despite the successes that we as a community have achieved several challenges remain to be addressed The theme for this eighth meeting of the premier international conference on software reuse is the management of software variability for reusable software All reusable software operates in multiple contexts and has to accommodate the differences between these contexts through variation In modern software the number of variation points may range in the thousands with an even larger number of dependencies between these points Topics addressing the theme include the representation design assessment and evolution of software variability The proceedings that you are holding as you read this report on the current state of the art in software reuse Topics covered in the proceedings include software variability testing of reusable software artefacts feature modeling aspect oriented software development composition of components and services model based approaches and several other aspects of software reuse May 2004 Jan Bosch Charles Krueger Organizing Committee General Chair Kyo C Kang Pohang University of Science and Technology Korea Program Co chairs Jan Bosch University of Groningen The Netherlands Charles Krueger BigLever Software Inc U S A

Domain-Specific Program Generation Christian Lengauer, Don Batory, Charles Consel, Martin Odersky, 2004-11-18 Program generation holds the promise of helping to bridge the gap between application level problem solutions and efficient implementations at the level of

today's source programs as written in C or Java. Thus program generation can substantially contribute to reducing production cost and time to market in future software production while improving the quality and stability of the product. This book is about domain specific program generation; it is the outcome of a Dagstuhl seminar on the topic held in March 2003. After an introductory preface by the volume editors, the 18 carefully reviewed revised full papers presented are organized into topical sections on surveys of domain specific programming technologies, domain specific programming languages, tool support for program generation, domain specific techniques for program optimization.

Effective Software Maintenance and Evolution Stanislaw Jarzabek, 2007-05-07 With software maintenance costs averaging 50% of total computing costs, it is necessary to have an effective maintenance program in place. Aging legacy systems, for example, pose an especially rough challenge as veteran programmers retire and their successors are left to figure out how the systems operate. This book explores program analyzers reveal.

The Unified Process Construction Phase Scott Ambler, 2000-01-08 Is the Unified Process the be all and end all standard for developing object oriented component based software? This book focuses on the design and implementation skeletal versions of systems for purposes of testing early in the life cycle for quality control.

Object Thinking David West, 2004-02-11 In OBJECT THINKING, esteemed object technologist David West contends that the mindset makes the programmer, not the tools and techniques. Delving into the history, philosophy, and even politics of object oriented programming, West reveals how the best programmers rely on analysis and conceptualization on thinking rather than formal process and methods. Both provocative and pragmatic, this book gives form to what's primarily been an oral tradition among the field's revolutionary thinkers and it illustrates specific object behavior practices that you can adopt for true object design and superior results. Gain an in-depth understanding of prerequisites and principles of object thinking. Object knowledge implicit in eXtreme Programming (XP) and Agile software development. Object conceptualization and modeling. Metaphors, vocabulary, and design for object development. Learn viable techniques for decomposing complex domains in terms of objects. Identifying object relationships, interactions, and constraints. Relating object behavior to internal structure and implementation design. Incorporating object thinking into XP and Agile practice.

CESAR - Cost-efficient Methods and Processes for Safety-relevant Embedded Systems Ajitha Rajan, Thomas Wahl, 2013-03-25 The book summarizes the findings and contributions of the European ARTEMIS project CESAR for improving and enabling interoperability of methods, tools, and processes to meet the demands in embedded systems development across four domains: avionics, automotive, automation, and rail. The contributions give insight to an improved engineering and safety process life cycle for the development of safety critical systems. They present a new concept of engineering tools integration platform to improve the development of safety critical embedded systems and illustrate the capacity of this framework for end user instantiation to specific domain needs and processes. They also advance the state of the art in component based development as well as component and system validation and verification with tool support. And finally, they describe industry relevant evaluated processes and methods, especially

designed for the embedded systems sector as well as easy adoptable common interoperability principles for software tool integration

Five Core Metrics Lawrence H. Putnam, Ware Myers, 2013 This is the digital version of the printed book Copyright 2003 To succeed in the software industry managers need to cultivate a reliable development process By measuring what teams have achieved on previous projects managers can more accurately set goals make bids and ensure the successful completion of new projects Acclaimed long time collaborators Lawrence H Putnam and Ware Myers present simple but powerful measurement techniques to help software managers allocate limited resources and track project progress Drawing new findings from an extensive database of software project metrics the authors demonstrate how readers can control projects with just Five Core Metrics Time Effort Size Reliability and Process Productivity With these metrics managers can adjust ongoing projects to changing conditions surprises that would otherwise cause project failure

Object-Oriented Technology. ECOOP 2001 Workshop Reader Akos Frohner, 2002-05-02 For the fth time in its history in cooperation with Springer Verlag the European C ference on Object Oriented Programming ECOOP conference series is glad to offer the

object oriented research community the ECOOP 2001 Workshop Reader a compendium of workshop reports panel transcripts and poster abstracts pertaining to the ECOOP 2001 conference held in Budapest from 18 to 22 June 2001 ECOOP 2001 hosted 19 high quality workshops covering a large spectrum of search topics The workshops attracted 460 participants on the first two days of the conference Originally 22 workshops were chosen from 26 proposals by a workshop selection committee following a peer review process Due to the overlaps in the areas of interest and the suggestions made by the committee six of the groups decided to merge their topics into three workshops This book contains information on the panel poster session and 17 workshop reports for which we have to thank our workshop organizers who did a great job in preparing and formatting them The reports are organized around the main line of discussion comparing the various approaches and giving a summary on the debates They also include the list of participants affiliations contact information and the list of contributed position papers Although they usually do not include abstracts or excerpts of the position papers they do give useful references to other publications and websites where more information may be found

Development and Evolution of Software Architectures for Product Families Frank van der Linden, 2003-08-06 This book originates from a workshop organised by ESPRIT project 20 477 ARES in Las Palmas de Gran Canaria Spain February 1998 ARES is an acronym for Architectural Reasoning for Embedded Systems Within this project we investigate techniques to deal with problems of software architecture of families of embedded systems It is the second workshop organised by this project Its predecessor was held in Las Navas de Marques Spain November 1996 The proceedings of the first workshop are only available in electronic format at <http://www.dit.upm.es/ares> The second workshop succeeded even more than the first one in gathering many of the most prominent people working in the area of software architecture for product families or product lines This second workshop consisted of six sessions The first session was meant to report the ARES results according to the topics of the next five sessions The remaining sessions dealt with different aspects of software architecture focussed on applications for product families or product lines Because there will be a separate book covering all ARES results the first session is not included in this book The workshop was chaired by Henk Obbink from Philips Research and Paul Clements from the Software Engineering Institute at Carnegie Mellon University They prepared and presented an overall conclusion at the end of the workshop This conclusion was used in the introduction to this book

Software Engineering - ESEC/FSE '99 Oskar Nierstrasz, Michel Lemoine, 1999-08-30 For the second time the European Software Engineering Conference is being held jointly with the ACM SIGSOFT Symposium on the Foundations of Software Engineering FSE Although the two conferences have different origins and traditions there is a significant overlap in intent and subject matter Holding the conferences jointly when they are held in Europe helps to make these thematic links more explicit and encourages researchers and practitioners to attend and submit papers to both events The ESEC proceedings have traditionally been published by Springer Verlag as they are again this year but by special arrangement the proceedings will be distributed to members of

ACM SIGSOFT as is usually the case for FSE ESEC FSE is being held as a single event rather than as a pair of collocated events Submitted papers were therefore evaluated by a single program committee ESEC FSE represents a broad range of software engineering topics in mainly two continents and consequently the program committee members were selected to represent a spectrum of both traditional and emerging software engineering topics A total of 141 papers were submitted from around the globe Of these nearly half were classified as research papers and the rest as both research and experience papers Twenty nine papers from five continents were selected for presentation and inclusion in the proceedings Due to the large number of industrial experience reports submitted we have also introduced this year two sessions on short case study presentations

System on Chip Design Languages Anne Mignotte, Eugenio Villar, Lynn Horobin, 2002-04-30 This volume is the third in a series It brings together a selection of the best papers from two international electronic design language conferences in 2001 The conferences are the Hardware Description Language Conference HDLCon in USA the Forum on Design Languages FDL in Europe The papers cover a range of topics including HDL specification and modelling languages including results from standardisation process from specialised languages such as VHDL and Verilog to general purpose languages such as C SystemC SpecC and Java Analogue and mixed signal specification and design System on chip real time and embedded specifications Real life experiences in using HDLs and EDA vendors point of view describing future design tools that utilise HDLs such as Web design environments simulation verification and synthesis tools The results presented in these papers will help researchers and practising engineers to keep abreast of developments in this rapidly evolving field

Generative and Component-Based Software Engineering Jan Bosch, 2003-06-30 The size complexity and integration level of software systems is increasing constantly Companies in all domains identify that software defines the competitive edge of their products These developments require us to constantly search for new approaches to increase the productivity and quality of our software development and to decrease the cost of software maintenance Generative and component based technologies hold considerable promise with respect to achieving these goals GCSE 2001 constituted another important step forward and provided a platform for academic and industrial researchers to exchange ideas These proceedings represent the third conference on generative and component based software engineering The conference originated as a special track on generative programming from the Smalltalk and Java in Industry and Education Conference STJA organized by the working group Generative and Component Based Software Engineering of the Gesellschaft für Informatik FG 2.1.9 Object Oriented Software Engineering However the conference has evolved substantially since then with its own independent stature invited speakers and most importantly a stable and growing community This year's conference attracted 43 submissions from all over the world indicating the broad international interest in the research field Based on careful review by the program committee 14 papers were selected for presentation I would like to thank the members of the program committee all renowned experts for their dedication in preparing thorough reviews of the submissions
