Indigenous Knowledge & Development Monitor, 2000 Enhanced Oil Recovery Field Case Studies James J. Sheng, 2013-04-10 The fundamentals of individual chemical process alkaline surfactant and polymer and their two component combinations have been discussed in preceding chapters This chapter only briefly discusses the synergy and practical issues in the three component combination Alkaline surfactant polymer process The practical issues discussed are produced emulsion scaling and chromatographic separation Overall performance and amount of chemicals used in field projects are summarized Most of the Chinese field cases were presented in Sheng 2011 In this chapter we only present a few field cases outside China These projects are the Lawrence field in Illinois the Cambridge Minnelusa field the West Kiehl field and Tanner field in Wyoming and Lagomar LVA 6 9 21 area in Venezuela **Enhanced Oil Recovery Field Case Studies** Bradley Govreau, Brian Marcotte, Alan Sheehy, Krista Town, Bob Zahner, Shane Tapper, Folami Akintunji, 2013-04-10 Developments in microbial enhanced oil recovery MEOR have made huge advancements over the last few years A new programmatic approach to MEOR is organic oil recovery OOR the management of the microbial ecology to facilitate the release of oil from the reservoir Using this breakthrough process which does not require microbes to be injected over 180 applications have been conducted between 2007 and 2011 in producing oil and water injection wells in the United States and Canada This chapter reviews the OOR process a summary of results and two case studies in detail Enhanced Oil Recovery Field Case Studies John M. Putnam, 2013-04-10 This chapter introduces the reader to the fundamentals of field implementation for chemical EOR projects Chemical handling processing and injection schemes are discussed and current day facilities and equipment systems are shown from actual projects Design requirements for processing polymer alkaline agents and surfactants provide the reader with an understanding of special considerations for facility process flow design materials of construction project logistics and daily operations Useful spreadsheets for calculating chemical consumption rates and polymer system design basics are shown Basic water quality issues are introduced for polymer surfactant polymer alkaline polymer and alkaline surfactant polymer projects Enhanced Oil Recovery Field Case Studies James J. Sheng, 2013-04-10 This chapter presents

models of wettability alteration using surfactants and upscaling models related to oil recovery in fractured carbonate reservoirs Chemicals used in carbonate reservoirs are reviewed The presented field cases where surfactants were used to stimulate oil recovery are the Mauddud carbonate in Bahrain the Yates field and the Cretaceous Upper Edwards reservoir in Texas the Cottonwood Creek field in Wyoming and the Baturaja formation in the Semoga field in Indonesia *Enhanced Oil Recovery Field Case Studies* Russell T. Johns, Birol Dindoruk, 2013-04-10 One of the most accepted and widely used technologies for enhanced oil recovery is injection of gas or solvent that is miscible or near miscible with reservoir oil Understanding gas flooding requires a good understanding of the interaction of phase behavior and flow in the reservoir and how oil and gas develop miscibility *Enhanced Oil Recovery Field Case Studies* James J. Sheng, 2013-04-10 In this chapter the fundamentals of surfactant flooding are covered which include microemulsion properties phase behavior interfacial tension capillary desaturation surfactant adsorption and retention and relative permeabilities The surfactant polymer interactions are discussed The mechanisms and screening criteria are briefly discussed The field cases presented include low tension waterflooding Loma Novia Wichita County Regular field sequential micellar polymer flooding El Dorado Sloss micellar polymer flooding Torchlight and Delaware Childers and Minas SP project preparation and SP flooding Gudong

technical professionals covering the fundamental as well as the advanced aspects of EOR Enhanced Oil Recovery - Selected Topics Badie I Morsi,Hseen O Baled,2022-11-02 Enhanced Oil Recovery Selected Topics includes nine chapters in five sections Chapters address enhanced oil recovery EOR processes such as miscible flooding surfactants flooding polymers flooding and microbial flooding They also present fundamental and technical details along with case studies This book provides ample and useful knowledge for the design of laboratory scale and field scale EOR processes It is a useful resource for practitioners working in oil field production applications and graduate students pursuing advanced degrees in petroleum engineering **Chemical Enhanced Oil Recovery Simulation in Highly Stratified Heterogeneous Reservoir** Jorge Andres Navas Guzman (Sr.),2019 Oil and gas companies are looking for proven hydrocarbon reserves from their existent drained reservoirs with the objective to extend the production and economical life of their fields The chemical enhanced oil recovery CEOR has raised with a myriad type of process that goes beyond the primary and secondary recovery The polymer flooding PF is a widely applied process in reservoirs with low swept efficiency after the water flooding WF process Colombian field has one of the first polymer pilots in the region with positive results of oil recovery in A sands Thus the operator is interested in the expansion of PF for the same reservoir and even in deeper reservoir sands This thesis focuses in the evaluation of different scenarios of PF and surfactant polymer flooding SPF for the producer layers A and B with a mechanistic model thus obtaining new recommendations for the recovery strategy in the field Therefore a sector model was constructed from a full field commercial simulator to the in house simulator UTCHEMRS In addition this sector model was migrated to a second commercial simulator allowing a performance comparison for three simulators UTCHEMRS model was validated with the commercial simulators through the history matching HM phase The primary and waterflood history match was in agreement with the field data Simulation results suggested that PF for the base case in A sands presented an incremental oil recovery of up to 12% additional to water flooding Additionally PF was extended to the lower layer B sand to investigate the potential of polymer injection The PF injection in both reservoirs simultaneously loses swept efficiency and decreases the oil recovery in 3% However a hypothetical case of new infill producer wells with the objective of testing the individual reservoir performance has revealed that PF is having important raises in oil recovery for B sands as well Though further research should be developed in order to strengthen this interpretation Finally the results of SPF case for A sands are inconclusive because a laboratory tests of surfactant phase behavior is needed to ensure the lowest IFT in reservoir conditions **Enhanced Oil Recovery of the Nipisi Field** Noel M.
