D **Environmental Health Perspectives**, 2004 *Journey of the Universe* Brian Thomas Swimme, Mary Evelyn Tucker, 2011-06-28 The basis for the Emmy winning film, a wonderful highly readable account of the history of the universe from the Big Bang through the present moment. Thomas Lovejoy, University Professor in Environmental Science and Policy, George Mason University. Through the astonishing combined achievements of natural scientists worldwide we now have a detailed account of how galaxies and stars, planets and living organisms, human beings and human consciousness came to be. And yet we thirst for answers to questions that have haunted humanity from the very beginning: What is our place in the 14 billion year history of the universe? What roles do we play in Earth's history? How do we connect with the intricate web of life on Earth? In *Journey of the Universe*, Brian Thomas Swimme and Mary Evelyn Tucker tell the epic story of the universe from an inspired new perspective, weaving the findings of modern science together with enduring wisdom found in the humanistic traditions of the West, China, India, and indigenous peoples. The authors explore cosmic evolution as a profoundly wondrous process based on creativity, connection, and interdependence, and they envision an unprecedented opportunity for the world's people to address the daunting ecological and social challenges of our times. *Journey of the Universe* transforms how we understand our origins and envision our future. Though a little book, it tells a big story, one that inspires hope for a way in which Earth and its human civilizations could flourish together. What's most striking about Swimme and Tucker's work is a simple but beautiful assumption: a cosmological orientation opens the human mind to wonder, gratitude, humility, and creativity.

Orion **Fundamentals of Environmental and Toxicological Chemistry** Stanley E. Manahan, 2013-02-25 *Fundamentals of Environmental and Toxicological Chemistry*, Sustainable Science, Fourth Edition, covers university-level environmental chemistry with toxicological chemistry integrated throughout the book. This new edition of a bestseller provides an updated text with an increased emphasis on sustainability and green chemistry. It is organized based on the five spheres of Earth's environment: 1. the hydrosphere (water), 2. the atmosphere (air), 3. the geosphere (solid Earth), 4. the biosphere (life), and 5. the anthrosphere (the part of the environment made and used by humans). The first chapter defines environmental chemistry and each of the five environmental spheres. The second chapter presents the basics of toxicological chemistry and its relationship to environmental chemistry. Subsequent chapters are grouped by sphere, beginning with the hydrosphere and its environmental chemistry (water pollution, sustainability, and water as nature's most renewable resource). Chapters then describe the atmosphere (its structure and importance for protecting life on Earth), air pollutants, and the sustainability of

atmospheric quality The author explains the nature of the geosphere and discusses soil for growing food as well as geosphere sustainability He also describes the biosphere and its sustainability The final sphere described is the anthrosphere The text explains human influence on the environment including climate pollution in and by the anthrosphere and means of sustaining this sphere It also discusses renewable nonpolluting energy and introduces workplace monitoring For readers needing additional basic chemistry background the book includes two chapters on general chemistry and organic chemistry This updated edition includes three new chapters new examples and figures and many new homework problems
