Critical Voices in Teacher Education Barry Down, John Smyth, 2012-04-28 We live in dangerous times when educational policies and practices are debated largely in terms of how they fit with the needs of the free market This volume is a collection of writing by teacher educators that draws on their unique biographies experiences and perspectives to denounce these misguided norms It explores what it means practically and intellectually to teach for social justice in conservative times In a globalised world where the power of capital holds sway the purposes of social institutions such as universities and schools is being refashioned in ways that are markedly instrumental and technicist in nature The consequence is that teachers work is increasingly constrained by regimes of control such as standardised testing accountability transparency and national curricula In the meantime large numbers of students and teachers are disengaging physically emotionally and intellectually from learning The contributors to this edited volume present both a powerful critique of these developments and a counter hegemonic vision of teacher education founded on the principles and values of social justice democracy and critical inquiry Teacher education they argue involves a commitment to critical intellectual work that subjects some deeply entrenched assumptions beliefs habits routines and practices to closer scrutiny The contributing authors expose how ideology and power operate in seemingly blameless rational ways to perpetuate social hierarchies based on class gender sexuality race and culture Import Tariffs as Environmental Policy Instruments C. Kraus, 2013-06-29 The theoretical claims for eco tariffs are rigorously analyzed within a unified framework formed of an international trade model enriched with both a domestic and a global externality During the course of the analysis the model is modified to analyze an array of contexts for which eco tariffs have been claimed to improve environmental quality or welfare The circumstances and conditions are characterised under which such tariffs can be shown to improve environmental quality and social welfare taking account of

general equilibrium effects The theoretical results are applied in a policy analysis of eco tariffs and other trade instruments in the context of domestic and global environmental policy in order to assess the relevance of the eco tariffs that have been subjected to the theoretical analysis Finally the GATT WTO rules and regulations are presented since to date these have banned the use of eco tariffs The rules and regulations are mapped against the theoretical results to show which rules ought to be changed

**Environmental Education in a Climate of Reform** Sylvia Christine Almeida,2015-10-29 India is grappling with serious environmental issues that have been largely sparked by its galloping economy As a measure of its seriousness to reduce the environmental impacts it has spearheaded numerous policy initiatives One of the major thrusts of the proposed initiatives to curb environmental degradation has been to create an informed and well educated citizenry The federal mandates have triggered new curriculum policies and the compulsory teaching of environmental and sustainability education at all levels in all education institutions This volume examines the policy practice conundrum It looks at how national and international policy reforms reach practitioners in this case teacher educators Furthermore it unravels how teacher educators understand environmental education the ways in which they negotiate its demands on their busy schedules what helps them in determining relevant issues within this and finally how they implement these policies in their everyday practices It is evident from this book that while there have been some really well meaning development of policies their impact on teacher educators practice and therefore student teachers learning about Environmental Education is limited The study showed that while these teacher educators had a clear understanding of the environment and saw the need importance of incorporating Environmental Education in their daily practices they had very little scope to do so There were numerous factors that constrained implementation The book provides inputs on global policy practice gaps It offers valuable insights to a global audience grappling with understanding the ways in which environmental education policies are put into practice in emerging economies like India The final argument is thesis that while policy reforms are a step in the right direction they need to be backed up with strong implementation systems in order to be successful div

*Environmental Liability and the Interplay between EU Law and International Law* Emanuela Orlando,2023-07-24 The role of law in responding to global environmental problems and the interplay between different levels of regulation and

governance is becoming increasingly relevant in the field of liability and reparation for environmental damage. This book examines the relationship and reciprocal influences between the EU and the international legal order in a multilevel and comparative perspective in relation to the ongoing efforts to elaborate effective regimes of liability and reparation for environmental damage. It offers a comparative analysis of legal developments in the field of environmental liability within the EU and at the international law level and addresses questions concerning the impact of such interaction on the development, implementation and enforcement of appropriate responses to environmental damage within the respective legal orders and on a global level. Given the book's focus and the transnational legal dimension of the issues covered, this volume will be of great interest to legal academics and researchers working in the environmental law field from an EU law and international law perspective as well as more generally to scholars interested in the study of the relationship between EU and international law. Outside academia, the book will also be of great interest to practitioners wishing to get insights into the application of the law of environmental liability in the EU and at the international law level.
