Lein, 2023-09-05 Neurodevelopmental disorders are generally influenced by genetic as well as intrauterine and extrauterine factors that affect the fetal maternal environment and or brain development that continues after birth Specific genetic polymorphisms may increase susceptibility to environmental factors that alter the trajectory of brain development via diverse molecular mechanisms In particular the pre and post natal exposure to neurotoxic metals pesticides persistent organic pollutants and other chemicals is increasingly recognized as involved in the pathogenesis of neurodevelopmental disorders such as autism deficiency attention hyperactivity disorders neurodegenerative disorders such as Parkinson s and Alzheimer s disease chronic multiple sclerosis and even fetal and infant death including SIUDS Sudden Unexplained Intrauterine Death Syndrome and SIDS Sudden Infant Death Syndrome **The SAGE Encyclopedia of Intellectual and Developmental Disorders** Ellen Braaten, 2018-01-29 According to the CDC about one in six or about 15% of children aged 3 through 17 years have one or more developmental disabilities such as ADHD autism spectrum disorders cerebral palsy intellectual disability and learning disability Intellectual disorders are characterized by significant limitations in both

intellectual functioning and in adaptive behavior which covers many everyday social and practical skills impacting learning reasoning problem solving and other cognitive processes These disabilities originate before the age of 18 and continue across the life span Developmental disorders are chronic disabilities that can be cognitive or physical or both The disabilities appear before the age of 22 and are likely to progress across the lifespan Some developmental disorders are largely physical issues such as cerebral palsy or epilepsy Some individuals may have a disorder that includes a physical and intellectual disability for example Down syndrome or fetal alcohol syndrome Intellectual and developmental disorders are significant and growing issues that are studied across a number of disciplines The SAGE Encyclopedia of Intellectual and Developmental Disorders is aimed at students interested in psychology counseling education social work psychiatry health sciences and more This encyclopedia will provide an in depth look at a wide range of disorders alongside interventions the latest research translated for an undergraduate audience historical context and assessment tools for higher level students We will take a truly interdisciplinary approach by also covering sociocultural viewpoints policy implications educational applications ethical issues and more

Policy, Forum on Neuroscience and Nervous System Disorders, 2021-01-22 Humans are potentially exposed to more than 80 000 toxic chemicals in the environment yet their impacts on brain health and disease are not well understood The sheer number of these chemicals has overwhelmed the ability to determine their individual toxicity much less potential interactive effects Early life exposures to chemicals can have permanent consequences for neurodevelopment and for neurodegeneration in later life Toxic effects resulting from chemical exposure can interact with other risk factors such as prenatal stress and persistence of some chemicals in the brain over time may result in cumulative toxicity Because neurodevelopmental and neurodegenerative disorders such as attention deficit hyperactivity disorder and Parkinson s disease cannot be fully explained by genetic risk factors alone understanding the role of individual environmental chemical exposures is critical On June 25 2020 the National Academies of Sciences Engineering and Medicine s Forum on Neuroscience and Nervous System Disorders hosted a workshop to lay the foundation for future advances in environmental neuroscience The workshop was designed to explore new opportunities to bridge the gap between what is known about the genetic contribution to brain disorders and what is known and not known about the contribution of environmental influences as well as to discuss what is known about how genetic and environmental factors interact This publication summarizes the presentation and discussion of the workshop Organoids as Model Systems for Human Development, Disease and Clinical Applications Eumorphia Remboutsika, Thimios Mitsiadis, 2021-11-23 The Two-Way Link between Eating Behavior and Brain Metabolism Tanya Zilberter, 2016-01-13 This research topic collected and connected information concerning both the underlying metabolic mechanisms and consequences of eating behaviors These two aspects are tremendously important for a better understanding of eating behavior abnormalities as well as for improving education on eating disorders and behaviors *Transcriptomics from Aquatic Organisms to Humans* Libia Zulema Rodriguez-Anaya, Cesar Marcial Escobedo-Bonilla, 2021-12-13 Novel molecular techniques such as next generation sequencing are used to measure gene expression after exposure to a certain stimulus Data using these gene expression techniques are highly accurate sensitive and generate transcriptional profiles from species including humans fish and crustaceans This book includes transcriptomic studies of non infectious and infectious diseases affecting humans and environmental and physiological correlates affecting shrimp and fish aquaculture The book is intended for undergraduate and graduate students interested in one of the various research areas transformed by transcriptomics including human disease fish and crustacean physiological environmental and farming issues Key Features Documents the utility of next generation sequencing and RNA seq to a wide array of aquatic environmental and physiological issues as well as to human health Provides insights into the ways transcriptomics can contribute to the understanding of various research subjects such as aquatic animals fish ecology and human diseases Presents an account of the evolution of the techniques used to determine the transcriptome in crustacean aquaculture Describes the mechanisms of genetic interactions between different pathogens and the human host and their effects modifying gene expression levels
