Environmental Change Key Issues And Alternative Perspectives:

Environmental Change Frank Oldfield, 2005-08-25 *Environmental Change Key Issues and Alternative Approaches* describes and explains the significance of past and contemporary environmental and climatic change. It outlines the conceptual framework for studies of environmental change by posing key questions and presenting the results of relevant research. It provides a non-specialist introduction to models in environmental change research and to the study of past environmental changes. Covering the last 400 000 years, special emphasis is placed on past periods of rapid warming, the nature of climatic variability over the last 1000 years, and the dramatic and accelerating changes in the Earth system heralded by the industrial revolution. The book is extensively referenced and illustrated. This book provides a balanced non-specialist basis for understanding and exploring the scientific issues underlying global change for advanced undergraduates in geography, environmental, earth, biological, and ecological sciences. Battleground: Environment Robin Morris Collin, 2008-07-30 The environment inflames passions in people on all points of the political spectrum. Controversies over such issues as the rise of cancer in industrialized countries, climate change, and urban sprawl have skyrocketed as we recognize the impact that humans have on the environment. Many people become immersed in these controversies at a local level before they know much about the topic; the nuances of many environmental conflicts are often overlooked as the media focuses on the adversarial nature of the conflict. This reference resource provides students, teachers, librarians, and citizens as a whole with the necessary first step in understanding these hot-button issues. Each entry identifies the issue involved, who was holding various points of view or positions, where and when the conflict occurred, and explains the cultural, social, and political context and dimensions of the conflict. Battleground: Environment provides in-depth analysis of over 100 of the most controversial topics involving the environment, including childhood asthma, the Kyoto Summit and Treaty, smart growth, the Three Gorges Dam in China, and genetically modified food. Entries include descriptions of public policies and discussions of the future of the controversy. Each entry concludes with cross-references and a short relevant bibliography suitable for student research. The resource includes numerous sidebars that discuss in detail particular local controversies that illuminate the complexity of the topics discussed. Fundamentals of the Physical Environment Peter Smithson, Ken Addison, Ken Atkinson, 2013-09-05 *Fundamentals of the Physical Environment* has established itself as a well-respected core introductory book for students of physical geography and the environmental sciences. Taking a systems approach, it demonstrates how the various factors operating at Earth's surface can and do interact, and how landscape can be used to decipher them. The nature of the earth, its atmosphere, and its oceans, the main processes of geomorphology, and key elements of ecosystems are also all explained. The final section on specific environments usefully sets in context the physical processes and human impacts. This fourth edition has been extensively revised to incorporate current thinking and knowledge and includes a new section on the history and study of physical geography, an updated and strengthened chapter on climate change, and a strengthened

section on the work of the wind a revised chapter 15 on cryosphere systems glaciers ice and permafrost a new chapter 23 on the principles of environmental reconstruction a new joint chapter 24 on polar and alpine environments a key new joint chapter 28 on current environmental change and future environments new material on the Earth System and cycling of carbon and nutrients themed boxes highlighting processes systems applications new developments and human impacts a support website at www.routledge.com/textbooks/9780415395168 with discussion and essay questions chapter summaries and extended case studies Clearly written well structured and with over 450 informative colour diagrams and 150 colour photographs this text provides students with the necessary grounding in fundamental processes whilst linking these to their impact on human society and their application to the science of the environment

Biophilic and Bioclimatic Architecture Amjad Almusaed, 2010-12-21 *Biophilic and Bioclimatic Architecture* is a guide to innovative architectural design for architects engineers and other specialists who are working with biophilic and bioclimatic architectural concepts *Biophilic and Bioclimatic Architecture* has three parts Part I focuses on the relationship between architecture and human needs and the creation process demonstrating the meaning of architectural value in architectural hypothesis Part II opens the way towards a new understanding of biophilic architecture as a response to the negative actions of humans and the negative effects of using natural resources Part III shows the benefits of combining the effects of the climate with the notion of human comfort in bioclimatic architecture

The Earth's Land Surface Kenneth J Gregory, 2010-03-23 Given the sheer scale of the topic under consideration here Professor Gregory does well to condense it into bite size pieces for the reader I recommend this text to all undergraduate students of physical geography and earth sciences particularly to those in their first and second years This book is a comprehensive and crucially inexpensive text that will provide students with a useful source on geomorphology Lynda York *The Geographical Journal* I would highly recommend this to anyone doing geology or geography at university as a go to book for geomorphology and landform Sara Falcone *Teaching Earth Science* An excellent source of information for anyone who needs a well informed easy to use reference volume to introduce them to the fascinating complexities of the earth's land surface past present and future Angela Gurnell *Queen Mary University of London* This introductory text details the land surface of the earth in a readable style covering the major issues key themes and sensitivities of the environments landscape Emphasising the major ideas and their development each chapter includes case studies and details of influential scientists not necessarily geomorphologists who have contributed to the progress of understanding Providing a very clear explanation of the understanding achieved and of the debates that have arisen the book is comprised of 12 chapters in four sections *Visualising the land surface* explains and explores the composition of the land surface and outlines how it has been studied *Dynamics of the land surface* considers the dynamics affecting the earth's land surface including its influences processes and the changes that have occurred *Environments of the land surface* looks to understand the land surface in major world regions highlighting differences between the areas *Management of the land*

surface is an examination of the current and future prospects of the management of the earth's land surface. With pedagogical features including further reading questions for discussion and a glossary, this original, lively text is authored by one of the leading experts in the field and will be core reading for first and second year undergraduates on all physical geography courses.

Facing Global Environmental Change Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czesław Mesjasz, Heinz Krummenacher, 2009-06-04

The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth Assessment Report AR4 of the Intergovernmental Panel on Climate Change (IPCC) which were disseminated on a large scale and reported extensively by the media. This was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large. The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US Al Gore. By taking this decision in favour of a leader who has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings, the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world.

Climate Change, Service Economy and Industry

Junmo Kim, 2010-10-27

This book shows how industries perceive weather as they pose their positioning in climate change adaptation. With empirical analysis, this book extends policy discussion. Weather and climate-related industries are clearly knowledge-intensive service sectors that have not blossomed yet. Holding his Ph.D. degree from the LBJ School, Dec 1997, Junmo Kim is a Professor at the Dept of Public Admin, Konkuk University in Seoul, Korea. Before coming to the University, he has served as an Associate Research fellow at two government-funded research institutes: the Science Technology Policy Institute (STePI) and Korea Inst of Public Admin (KIPA). His areas of interests include Science Industrial Technology Policy, Regional Development, Wage analysis and Policy Evaluation. At the university, he teaches Science Technology Policy, Policy Evaluation, Regional Development, and E-government issues. His major publications include *The South Korean Economy* (Ashgate, 2002), *Globalization and Industrial Development* (iUniverse, 2005) and contributing chapters in *Inequality and Industrial Change* (Cambridge, 2001). James K. Galbraith, ed. and *Learning and Knowledge for the Network Society* (Purdue University Press, 2004).

Global Environmental History Ian G. Simmons, 2008-03-05

Courses which deal with environmental history have long lacked a comprehensive overview. I. G. Simmons has made a significant contribution with a book that looks at the long-term history of environment and humanity from 10,000 BC to AD 2000. This far-reaching text considers the global picture and recognises the contributions of many disciplines including the natural sciences, the social sciences, and increasingly the humanities. As a starting point, this book takes the major phases of human technological

evolution of the last 12 000 years and considers how these have affected the natural world It then considers the response to conditions such as climate change putting today s preoccupations into a long term perspective This is a book of history not prophecy and so makes no judgements on current anxieties Glacier Science and Environmental Change Peter G. Knight,2008-04-15 Glacier Science and Environmental Change is an authoritative and comprehensive reference work on contemporary issues in glaciology It explores the interface between glacier science and environmental change in the past present and future Written by the world s foremost authorities in the subject and researchers at the scientific frontier where conventional wisdom of approach comes face to face with unsolved problems this book provides state of the art reviews of the key topics in glaciology and related disciplines in environmental change cutting edge case studies of the latest research an interdisciplinary synthesis of the issues that draw together the research efforts of glaciologists and scientists from other areas such as geologists hydrologists and climatologists color plate section with selected extra figures provided in color at www.blackwellpublishing.com/knight The topics in this book have been carefully chosen to reflect current priorities in research the interdisciplinary nature of the subject and the developing relationship between glaciology and studies of environmental change Glacier Science and Environmental Change is essential reading for advanced undergraduates postgraduate research students and professional researchers in glaciology geology geography geophysics climatology and related disciplines *Relevant Perspectives in Global Environmental Change* Julius Agboola,2011-12-22 Over the years environmental change has sharpened significant dynamic evolution and knowledge in organizational structures of organisms from cellular molecular to macro organism level including our society Changes in social and ecological systems due to environmental change will hopefully result in a shift towards sustainability with legislative and government entities responding to diverse policy and management issues concerning the building management and restoration of social ecological systems on a regional and global scale Solutions are particularly needed at the regional level where physical features of the landscape biological systems and human institutions interact The purpose of this book is to disseminate both theoretical and applied studies on interactions between human and natural systems from multidisciplinary research perspectives on global environmental change It combines interdisciplinary approaches long term research and a practical solution to the increasing intensity of problems related to environmental change and is intended for a broad target audience ranging from students to specialists **Food Security and Global Environmental Change** John Ingram,Polly Ericksen,Diana Liverman,2012-07-26 Global environmental change GEC represents an immediate and unprecedented threat to the food security of hundreds of millions of people especially those who depend on small scale agriculture for their livelihoods As this book shows at the same time agriculture and related activities also contribute to GEC by for example intensifying greenhouse gas emissions and altering the land surface Responses aimed at adapting to GEC may have negative consequences for food security just as measures taken to increase food security may exacerbate GEC The authors show that

this complex and dynamic relationship between GEC and food security is also influenced by additional factors food systems are heavily influenced by socioeconomic conditions which in turn are affected by multiple processes such as macro level economic policies political conflicts and other important drivers The book provides a major accessible synthesis of the current state of knowledge and thinking on the relationships between GEC and food security Most other books addressing the subject concentrate on the links between climate change and agricultural production and do not extend to an analysis of the wider food system which underpins food security this book addresses the broader issues based on a novel food system concept and stressing the need for actions at a regional rather than just an international or local level It reviews new thinking which has emerged over the last decade analyses research methods for stakeholder engagement and for undertaking studies at the regional level and looks forward by reviewing a number of emerging hot topics in the food security GEC debate which help set new agendas for the research community at large Published with Earth System Science Partnership GECAFS and SCOPE

The SAGE Handbook of Environmental Change John A Matthews, 2012-01-31 The SAGE Handbook of Environmental Change is an extensive survey of the interdisciplinary science of environmental change including recent debates on climate change and the full range of other natural and anthropogenic changes affecting the Earth ocean atmosphere system in the past present and future It examines the historic importance present status and future prospects of the field over two volumes With more than 40 chapters the books situate the defining characteristics and key paradigms within a state of the art review of the field including its changing nature and diversity of approaches evidence base key theoretical arguments resonances with other disciplines and relationships between theory research and practice Opening with a detailed contextualizing essay by the editors the work is arranged into six parts Part One Approaches to Understanding Environmental Change Part Two Evidence of Environmental Change and the Geo ecological Response Part Three Causes Mechanisms and Dynamics of Environmental Change Part Four Key Issues of Human induced Environmental Changes and Their Impacts Part Five Patterns Processes and Impacts of Environmental Change at the Regional Scale Part Six Responses of People to Environmental Change and Implications for Society Global in its coverage scientific and theoretical in its approach the books bring together an international set of respected editors and contributors to provide an exciting timely addition to the literature on climate change With the subjects interdisciplinary framework this book will appeal to academics researchers postgraduates and practitioners in a variety of disciplines including geography geology ecology environmental science archaeology anthropology politics and sociology

Environmental Change and Security Project Report ,2002 *Placing Critical Geography* Lawrence D. Berg,Ulrich Best,Mary Gilmartin,Henrik Gutzon Larsen,2021-11-29 This book explores the multiple histories of critical geography as it developed in 14 different locations around the globe whilst bringing together a range of approaches in critical geography It is the first attempt to provide a comprehensive account of a wide variety of historical geographies of critical geography from around the world Accordingly the chapters provide accounts of the development of critical approaches in geography from beyond the hegemonic Anglo American metropolises Bringing together geographers from a wide range of regional and intellectual milieus this volume provides a critical overview that is international and illustrates the interactions or lack thereof between different critical geographers working across a range of spaces The chapters provide a more nuanced history of critical geography suggesting that while there were sometimes strong connections with Anglo American critical geography there were also deeply independent developments that were part of the construction of very different kinds of critical geography in different parts of the world *Placing Critical Geographies* provides an excellent companion to existing histories of critical geography and will be important reading for researchers as well as undergraduate and graduate students of the history and philosophy of geography Managing Organisational Change Allan Ramdhony,Christoph Thiele,2024-02-19 Discover a fresh perspective on managing organisational change in this accessible textbook which links theory to practice and brings complex concepts to life Structured around the three pillars of successful change management the book examines change in the context of the global economy and looks at a range of international examples Key features include Case studies which explore the practical implications of change issues through companies such as the Alibaba Group NHS England GSK Tata Motors Nike Hewlett Packard and Indonesia s Krakatau Steel Practical and reflective exercises to encourage experimentation with tools and techniques and to deepen understanding **The Uncertain Certainty** P. H. Liotta,2003-01-01 This collection of essays moves beyond the frequent headline obsession with the Arab Israeli conflict to consider issues of human security and environmental change that may profoundly affect the Euro Mediterranean in the first five decades of the twenty first century Beginning with a set of conceptual questions Liota examines alternative views of security of multilateral efforts intended to promote stability and prosperity and of the various models that have been used to

explain conflict and cooperation in this region A scholarly assessment informed by the author s experience in policy work this analysis of many timely and complex topics will have long term significance for the Euro Mediterranean **Geography: A Very Short Introduction** John A. Matthews, David T. Herbert, 2008-05-22 Modern Geography has come a long way from its roots in simply mapping and naming the regions of the world Spanning both physical and human Geography the discipline today is unique as a subject bridging the divide between the sciences and humanities and between the environment and our society This Very Short Introduction reveals why *Coping with Global Environmental Change, Disasters and Security* Hans Günter Brauch, Ursula Oswald Spring, Czeslaw Mesjasz, John Grin, Patricia Kameri-Mbote, Béchir Chourou, Pál Dunay, Joern Birkmann, 2011-02-03 Coping with Global Environmental Change Disasters and Security Threats Challenges Vulnerabilities and Risks reviews conceptual debates and case studies focusing on disasters and security threats challenges vulnerabilities and risks in Europe the Mediterranean and other regions It discusses social science concepts of vulnerability and risks global regional and national security challenges global warming floods desertification and drought as environmental security challenges water and food security challenges and vulnerabilities vulnerability mapping of environmental security challenges and risks contributions of remote sensing to the recognition of security risks mainstreaming early warning of conflicts and hazards and provides conceptual and policy conclusions *Our Earth's Changing Land: L-Y* Helmut Geist, 2006 Scientists predict that the environment over the next 100 years will be threatened by severe challenges the loss of biodiversity expected changes in world wide climate and decreasing amounts of arable land and potable water for an exploding human population All of these will greatly impact how the earth will be able to support life in the future And at the center of these global environmental changes are developments in land use Over the last 300 years and in particular the last 50 years the earth s land has been altered drastically as a result of increasing industrialization and urbanization worldwide as well as by changes in agricultural techniques in lands under cultivation These developments raise troubling questions about our future How will these changes affect the sustainability of certain types of land use How will they impinge upon critical regions like rainforests and deserts Will the earth be able to provide for the basic human needs of food shelter and water
