Posthuman Personhood Daryl J. Wennemann, 2013-05-02 Posthuman Personhood takes up the ethical challenge posed by Francis Fukuyama's work *Our Posthuman Future* Daryl J Wennemann argues that the traditional concept of personhood may be fruitfully applied to the ethical challenge we face in a posthuman age He draws upon Wilfrid Sellars treatment of the concept of a person within the manifest image of man in the world Sellars proposed that we develop a stereoscopic view of reality that includes both a scientific understanding of the world and a meaningful place for persons living and acting in the world Following Mary Anne Warren Wennemann develops a distinction between two meanings of the term human a biological meaning and a moral meaning and maintains that all biologically human beings are persons But it is not necessarily the case that all persons must be biologically human After drawing on a contemporary version of Kant's distinction between a theoretical possibility and a real possibility the book posits that biologically non human persons like robots computers or aliens are a theoretical possibility but that we do not know if they are a real possibility Finally Wennemann describes an ethic of self limitation for the posthuman age

Original Sin in the Twenty-First Century Richard J. Coleman, 2021-08-11 *Original Sin in the 21st Century* begins with a cold hard fact Christians we have a problem No one is listening to us when we talk about original sin That will change as you follow an exploration of original sin as an enduring truth about human nature This book is not another exposition of either the history or the doctrine of original sin Rather it opens up new avenues of consideration such as original goodness as a counterweight to original sin a contemporary interpretation of the Adam Eve narrative the new relevancy of Reinhold Niebuhr's recognition that we are not as good as our ideals and a soul searching inquiry into whether original sin is too dark or perhaps not dark enough The twenty first century is far more than a backdrop This book invites us to rethink what sin looks like when the world warms when AI is created in our own image and when sin thrives on indifference and willful ignorance The author will quickly convince you this century is both an opportunity and an imperative to rethink original sin for what lies ahead

Truly Human Enhancement Nicholas Agar,2013-12-13 A nuanced discussion of human enhancement that argues for enhancement that does not significantly exceed what is currently possible for human beings The transformative potential of genetic and cybernetic technologies to enhance human capabilities is most often either rejected on moral and prudential grounds or hailed as the future salvation of humanity In this book Nicholas Agar offers a more nuanced view making a case for moderate human enhancement improvements to attributes and abilities that do not significantly exceed what is currently possible for human beings He argues against radical human enhancement or improvements that greatly exceed current human capabilities Agar explores notions of transformative change and motives for human enhancement distinguishes between the instrumental and intrinsic value of enhancements argues that too much enhancement undermines human identity considers the possibility of cognitively enhanced scientists and argues against radical life extension Making the case for moderate enhancement Agar argues that many objections to enhancement are better understood as directed at the degree of enhancement rather than enhancement itself Moderate human enhancement meets the requirement of truly human enhancement By radically enhancing human cognitive capabilities by contrast we may inadvertently create beings post persons with moral status higher than that of persons If we create beings more entitled to benefits and protections against harms than persons Agar writes this will be bad news for the unenhanced Moderate human enhancement offers a more appealing vision of the future and of our relationship to technology

Future Humans in Fiction and Film Louisa MacKay Demerjian, Karen F. Stein, 2019-01-10 This book will appeal to everyone who reads science fiction or thinks about science and its impact on our lives It raises profound economic ethical political sociological and psychological questions It explores our fears and fantasies as it examines a range of fictions films and TV programs that speculate about the possibilities of humans in the future The contributions here ask central questions that have provoked the creators and readers of science fiction since Mary Shelley inaugurated the genre with her novel *Frankenstein* What are the aims and limits of science and technology What are our responsibilities toward the products of our advancing science and technology What kinds of creatures will we produce or encounter in the future What rights will we grant to these creatures or more worryingly will they grant to us Do science and technology make us more civilized or more barbaric How should we treat each other Ultimately what does it mean to be human **The Priority of the Other** Mark Freeman, 2014 Contemporary psychology as well as our own self understanding remains largely ego centric in focus with the self being seen as the primary source of meaning and value According to Mark Freeman this perspective is belied by much of our experience Working from this basic premise he proposes that we adopt a more ex centric perspective one that affirms the priority of the Other in shaping human experience In doing so he offers nothing less than a radical reorientation of our most basic ways of making sense of the human condition In speaking of the Other Freeman refers not only to other people but also to those non human others for instance nature art God that take us beyond the ego and bring us closer to the world In speaking of the Other s priority he insists that there is much in life that comes before us By thinking and living the priority of the Other we can therefore become better attuned to both the world beyond us and the world within At the heart of Freeman s perspective are two fundamental ideas The first is that the Other is the primary source of meaning inspiration and existential nourishment The second is that it is the primary source of our ethical energies and that being responsive and

responsible to the world beyond us is a defining feature of our humanity There is a tragic side to Freeman s story however Enraptured though we may be by the Other we frequently encounter it in a state of distraction and fail to receive the nourishment and inspiration it can provide And responsive and responsible though we may be it is perilously easy to retreat inward to the needy ego The challenge therefore is to break the spell of the ordinary oblivion that characterizes much of everyday life The Priority of the Other can help us rise to the occasion *The Ethics of Human Enhancement* Steve Clarke, Julian Savulescu, C. A. J. Coady, Alberto Giubilini, Sagar Sanyal, 2016-10-13 We humans can enhance some of our mental and physical abilities above the normal upper limits for our species with the use of particular drug therapies and medical procedures We will be able to enhance many more of our abilities in more ways in the near future Some commentators have welcomed the prospect of wide use of human enhancement technologies while others have viewed it with alarm and have made clear that they find human enhancement morally objectionable The Ethics of Human Enhancement examines whether the reactions can be supported by articulated philosophical reasoning or perhaps explained in terms of psychological influences on moral reasoning An international team of ethicists refresh the debate with new ideas and arguments making connections with scientific research and with related issues in moral philosophy Citizen Cyborg James Hughes, 2004-10-27 A provocative work by medical ethicist James Hughes Citizen Cyborg argues that technologies pushing the boundaries of humanness can radically improve our quality of life if they are controlled democratically Hughes challenges both the technophobia of Leon Kass and Francis Fukuyama and the unchecked enthusiasm of others for limitless human enhancement He argues instead for a third way democratic transhumanism by asking the question destined to become a fundamental issue of the twenty first century How can we use new cybernetic and biomedical technologies to make life better for everyone These technologies hold great promise but they also pose profound challenges to our health our culture and our liberal democratic political system By allowing humans to become more than human posthuman or transhuman the new technologies will require new answers for the enduring issues of liberty and the common good What limits should we place on the freedom of people to control their own bodies Who should own genes and other living things Which technologies should be mandatory which voluntary and which forbidden For answers to these challenges Citizen Cyborg proposes a radical return to a faith in the resilience of our democratic institutions **The Human Enhancement Debate and Disability** M. Eilers, K. Grüber, C. Rehmann-Sutter, 2014-07-30 Improving human characteristics goes beyond compensating for an impairment This book explores the rich and complex relationship between enhancement and impairment showing that the study of disability offers new ways of thinking about the social and ethical implications of improving the human condition **DNA** Linda L. McCabe, Edward R.B. Life, Death, Personhood and the Transhumanist Movement** D. John Doyle, 2018-09-01 This book is a critical examination of the philosophical and moral issues in relation to human enhancement and the various related medical developments that are now rapidly moving from the laboratory into the clinical realm In the book the author critically examines technologies such as genetic engineering neural implants pharmacologic enhancement and cryonic suspension from transhumanist and bioconservative positions focusing primarily on moral issues and what it means to be a human in a setting where technological interventions sometimes impact strongly on our humanity The author also introduces the notion that death is a process rather than an event as well as identifies philosophical and clinical limitations in the contemporary determination of brain death as a precursor to organ procurement for transplantation The discussion on what exactly it means to be dead is later applied to explore philosophical and clinical issues germane to the cryonics movement Written by a physician scientist and heavily referenced to the peer reviewed medical and scientific literature the book is aimed at advanced students and academics but should be readable by any intelligent reader willing to carry out some side reading No prior knowledge of moral philosophy is assumed as the various key approaches to moral philosophy are outlined early in the book
