Controlled Clinical Trials in Neurological Disease Roger J. Porter, Bruce S. Schoenberg, 2011-10-01 The evaluation of the efficacy and safety of a clinical tool be it a diagnostic technique a preventive methodology or a therapeutic intervention is an important responsibility of physicians The history of medicine is characterized by the authoritarianisms of teachers and of organizations giving way to the clinical experience of physicians authoritarian dictum was replaced by case report and then by case series As physicians learned to substitute the analysis of data for the inconsistencies of dictums and anecdotes the problems of the case series as an investigative tool became more evident patient selection criteria measurements of outcome significance of results and extrapolation of conclusions to the community of patients In response to these issues the methodology of the controlled clinical trial has evolved and with it the instruments of study design and of biostatistics as aids to study design and data analysis The medical surgical armamentarium has evolved from being dependent solely upon the observations and conclusions of a skilled clinician to being constructed upon the systematic collection and evaluation of data by a team of skilled clinicians and their statistical colleagues this is the controlled clinical trial During the past two decades the evaluation of clinical approaches to prevention and therapy has become particularly important to clinicians concerned with nervous system dysfunction There has been and continues to be an explosion of information from the basic neurosciences and from the application of biotechnology to the nervous system *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1991 Rosenberg's Molecular and Genetic Basis of Neurological and Psychiatric Disease, Seventh Edition Roger N. *Digital Technologies in Movement Disorders* ,2023-07-24 Digital Technologies in Movement Disorders Volume Five updates on the latest advances in new technologies for the care of common conditions including Parkinson s disease and other diseases The book has been organized in four differentiated sections with chapters that cover an Introduction key concepts and overview of digital solutions Applications of AI in MD Digital Biomarkers in MD Sensors basic concepts for the MD specialist Wearable systems in MD Quantitative gait analysis The challenges and opportunities of remote evaluation in MD Telemedicine in MD ePROs eCOA and other digital health solutions HIFU Telerrehabilitation and other therapeutical applications of technology and more Includes a multidisciplinary review of topics such as the input of care providers and engineers Reviews new technological advances Includes practice oriented technologies and innovations that have direct applications in the clinic      The NIH Record ,1992      Paraneoplastic Neurologic Disorders ,2024-03-15 This book extensively reviews Paraneoplastic Neurological Syndromes in light of the most recent descriptions of autoantibodies against neuronal cell surface antigens only partly associated with paraneoplastic disorders and the introduction of new immunological drugs that can contribute to causing diseases that are pathogenetically indistinguishable from paraneoplastic syndromes These two new developments have not been addressed in other volumes available on the market Section 1 focuses on immunological defense mechanisms against tumors Besides investigating the pathogenetic mechanisms of these disorders this section will also explore what the introduction of new drugs used in immune checkpoint inhibitor cancer therapy is teaching us in terms of immunopathogenesis The second section will present individual syndromes phenotypical clinical manifestations of the CNS PNS NMJ and muscle These chapters will however be preceded by an epidemiological analysis and a chapter describing the clinical approach to patients with these disorders Consideration will also be given in specific

chapters to general therapeutic strategies and the techniques used to search for diagnostically relevant autoantibodies. Presentation of the individual diseases will be followed by a third section investigating the role of antibody markers presented in three chapters differentiating cytoplasmic nuclear and neuronal cell surface reactivities. The innovative component of the final two sections compared to previously published volumes lies in their presentation of the profile of paraneoplastic diseases by tumor type. Special attention will be given to thymoma involved particularly with novel antibodies against surface antigens and neuroendocrine tumours which are as yet comparatively unexplored in the literature. Lastly a clinical update will be provided on gynecological hematological and testicular malignancies. The last section will address side effects of the new immuno oncological drugs increasingly used in cancer therapy. The high number of neurological complications that occur when tumor checkpoints are inhibited against immune defences provides the ideal experimental model for understanding the pathogenesis of these diseases.

**Profiles paraneoplastic diseases by tumor type** Identifies the pathogenetic mechanisms of PNS and provides epidemiological analysis. **Presents individual syndromes of the CNS** PNS NMJ and muscle. **Investigates the role of antibody markers** Differentiates cytoplasmic nuclear and neuronal cell surface reactivities. **Discusses immune oncological drugs causing diseases that are indistinguishable from PNS** **Reviews therapeutic strategies and clinical approach to PNS patients**

**Neurobiology of Mental Illness** Dennis S. Charney, Joseph D. Buxbaum, Pamela Sklar, Eric J. Nestler, 2013-06-25 Our understanding of the neurobiological basis of psychiatric disease has accelerated in the past five years. The fourth edition of *Neurobiology of Mental Illness* has been completely revamped given these advances and discoveries on the neurobiologic foundations of psychiatry. Like its predecessors the book begins with an overview of the basic science. The emerging technologies in Section 2 have been extensively redone to match the progress in the field including new chapters on the applications of stem cells, optogenetics and image guided stimulation to our understanding and treatment of psychiatric disorders. Sections 3 through 8 pertain to the major psychiatric syndromes: the psychoses, mood disorders, anxiety disorders, substance use disorders, dementias and disorders of childhood onset. Each of these sections includes our knowledge of their etiology, pathophysiology and treatment. The final section discusses special topic areas including the neurobiology of sleep, resilience, social attachment, aggression, personality disorders and eating disorders. In all there are 32 new chapters in this volume including unique insights on DSM 5, the Research Domain Criteria (RDoC) from NIMH and a perspective on the continuing challenges of diagnosis given what we know of the brain and the mechanisms pertaining to mental illness. This book provides information from numerous levels of analysis including molecular biology and genetics, cellular physiology, neuroanatomy, neuropharmacology, epidemiology and behavior. In doing so it translates information from the basic laboratory to the clinical laboratory and finally to clinical treatment. No other book distills the basic science and underpinnings of mental disorders and explains the clinical significance to the scope and breadth of this classic text. The result is an excellent and cutting edge resource for psychiatric residents, psychiatric researchers, doctoral

students and postdoctoral fellows the neurosciences
