Controlling Design Variants Modular Product Platforms Hardcover:

Controlling Design Variants Anna Ericsson, Gunnar Erixon, 1999 Introduces the concept of modular design within the product platform approach intended to increase company efficiency while reducing costs and time to market Companies can achieve significant advantages by separating parts that should vary to satisfy customer needs from parts that should be kept as common units The terminology and a five step method for creating modular product platforms are developed Back cover

Technical Digest, 1999 Advances in Product Family and Product Platform Design Timothy W. Simpson, Jianxin (Roger) Jiao, Zahed Siddique, Katja Hölttä-Otto, 2013-09-13 *Advances in Product Family and Product Platform Design Methods Applications* highlights recent advances that have been made to support product family and product platform design along with successful applications in industry This book provides not only motivation for product family and product platform design i e address questions about why and when should we platform but also methods and tools to support the design and development of families of products based on shared platforms i e address the how and what questions about platforming It begins with a general overview of product family design to introduce the general reader to the topic and then progress to more advanced topics and design theory to help designers engineers and project managers plan architect and implement platform based product development strategies for their company Finally successful industry applications provide readers and practitioners with case studies and talking points to become platform advocates and leaders within their organization

Cooperative Decision-Making in Modular Product Family Design Marc Windheim, 2019-11-21 The development of modular product families holds enormous economic potential for companies as there are always great opportunities but also risks associated with all life phases of a product However these fundamental and far reaching effects inevitably lead to conflicting objectives when defining modular product structures which makes decision making in product development particularly complex Considering relevant theories from decision theory and product family design this book presents an innovative method to support decision makers in the development of modular product families The central element of the method is a novel Modularity Decision Dashboard MDD which interactively visualizes all decision relevant data The findings presented here confirm that applying the method to real world decision making problems leads to a more balanced ratio between internal and external variety and thus significantly contributes to the efficient economic benefit of modularization

Methodical Development of Modular Product Families Dieter Krause, Nicolas Gebhardt, 2023-02-01 This book focuses on the development of multi variant products using modular product structures and thus addresses the reduction of complexity from a product development perspective These modular product structures allow for a greater variety of demand with a smaller internal variety of components and processes As a supplement to the common product development methodology the

necessary basics of modularity and variant diversity as well as the corresponding methods are presented comprehensively. The book thus summarizes the current state of science as well as the research activities of the past ten years at the Institute of Product Development and Design Technology at the TU Hamburg Harburg. The target groups: This book is aimed at product developers and decision makers in practice. Science is offered a helpful reference book and interested engineering students can immerse themselves in the development of modular product families with the necessary basics. This book is a translation of the original German 1st edition *Methodische Entwicklung modularer Produktfamilien* by Dieter Krause, Nicolas Gebhardt, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature, in 2018. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Product Platform and Product Family Design Timothy W. Simpson, Zahed Siddique, Roger Jianxin Jiao, 2006-03-20. Designing products and product families so they may be customized for the global marketplace and achieving these goals in abbreviated time period while maintaining production efficiencies are the keys to successful manufacturing operations. The research on these areas has matured rapidly over the last decade. Today's highly competitive and volatile marketplace is reshaping the way many companies do business as rapid innovation and mass customization offer a new form of competitive advantage. In response, companies like Sony, Black and Decker, and Kodak have successfully implemented strategies to design and develop an entire family of products to satisfy a wide variety of customer requirements. *Product Platform and Product Family Design: Methods and Applications* discusses how product platform and product family design can be used successfully to increase variety within a product line, shorten manufacturing lead times, reduce overall costs within a product line. The material available here will serve as both a reference and a hands-on guide for practitioners involved in the design, planning, and production of products. Included are real-life case studies that explain the benefits of platform-based product development.

Variant Management of Modular Product Families in the Market Phase Björn Avak, 2006. **Design for Configuration** Asko Riitahuhta, Antti Pulkkinen, 2012-12-06. Product Structuring for Design Reuse. Product Platform systems. Configuration and Modularisation is gaining growing attention in global operating companies as a means to enhance productivity in manufacturing of customised product variants. In that situation it was a great opportunity to get the 5th Product Structuring Workshop to Tampere. The special theme of the workshop was chosen: Design for Configuration. We see that Knowledge Systematisation is an important research area for Product Structuring. We made a decision to apply Knowledge Systematisation for the workshop itself; we used the small group working method Double Team Method in workshop discussions for creating added values based on presented papers, and after the workshop we have made a synthesis for crystallizing results from papers and group works. On the behalf of organisers I thank for the

enthusiastic participation on the all of workshop and Finnish Academy and Tampere Centre of Expertise for stages funding the workshop and publication of this book I am sure that all participants would like to join to my many thanks for the workshop secretary Ms Jenni Kauppila for her efficient organisation work After workshop she has made excellent work as our editorial secretary

Modular Product Development for Mass Customization Ahm Shamsuzzoha,2010-09 Product customization is a growing concern in today s competitive business environment A customer

driven product design and development system must be developed to respond to customers aspirations and demands Success in customization process is achieved by swiftly reconfiguring product development process and business strategies with respect to individual customers needs and dynamic production requirements Product reconfiguration approach allows satisfying unexpected customers demand through offering extra features It permits customers to choose their products based on choices of product attributes Along with product reconfiguration process a new level of information integration among product development participants is required both within the firm and with external environments In this book the integration of information system among potential customers designers and manufacturers is developed with a view to fabricate custom built products This integration process also needs to formulate with appropriate production strategies such as modularity platform based product development commonality etc to meet diverse market demands
