Convert Your Home To Solar Energy:

Off Grid Solar Living Allen Freeman, 2017-12-11 Off Grid Solar Living Total Solar Conversion for Your Home on a Budget Outdoor Cooking with Solar There is a saying that solar energy might be the last gold rush energy resource for people in the digital age to exploit Energy produced by sunlight isn't owned by any government Energy produced by sunlight isn't taxed as a commodity by anyone The era of renewable energy is dawning and every homeowner who is regularly taken aback by their home energy bills for electricity should take notice No strike that thought must take notice of the potential long term benefits of home solar energy conversion As a homeowner I was skeptical about changing the way I powered my home I was used to paying for electricity like any other homeowner The idea of converting my home to photovoltaic or PV system seemed too fringe or fad friendly A bit too new age for my taste I think as human beings it is hard to let go of the usual way of doing things I realized and accepted that the usual way of doing things in the public and private energy sector was coming to an end My research into home solar energy conversion began in earnest when I accepted the fact that the renewable energy industry will only continue to grow Now is the best time in decades to affordably buy a residential solar energy setup Converting your home energy setup to solar energy is expensive there is no question about it Still there are many readily available solar energy friendly government tax incentives available I saved 30 percent on my initial home solar energy conversion purchase costs The 5 000 kilowatt solar panel array installed on my roof cost me about 17 000 My home is about 2 500 square feet which is the national average How much you will actually pay for your home solar energy conversion will vary state to state and how much sun exposure your region experiences So think of it this way when you take out a mortgage on your home that is a long term investment as well Initial home solar energy conversion costs are comparable to the purchase of a brand new economy grade vehicle My home solar energy setup will pay for itself in a few years Most importantly after I sought out every solar friendly tax incentive that applied to me my initial purchase price of 17 000 was knocked down to 11 000 I am still hooked up to the utility grid but I only draw power from it at night or incidents of inclement weather That is unless I have enough energy stored in my reserve battery Moreover through a process called net metering any excess electricity that I generate is sold to the utility company Yes that's right the power company pays me However this is via non monetary credit as opposed to the popular fiction that utility companies pay for excess electricity generated by residential solar energy systems Still free energy is free energy right As a homeowner if you are on the fence whether you should go with solar or not here is what may help you cross that fence The 30% federal tax incentives will go away in just 3 more years Price of technology goes down over the years and Solar panels have been around for a long time so the prices are as low as they would go You are helping the environment and living Green You are saving money Just think where else can you invest 11 000 and get back 175 a month I have gone through the exact debate and done my research for over a year In this book I answer all the questions a homeowner would ask I also discussed how you can DIY your project vs
