Cooperation In Primates And Humans Mechanisms And Evolution:

Cooperation in Primates and Humans Peter Kappeler, Carel P. van Schaik, 2006-03-20 This book examines the many facets of cooperative behavior in primates and humans as some of the world's leading experts review and summarize the state of the art of theoretical and empirical studies of cooperation This book is the first to bridge the gap between parallel research in primatology and studies of humans Comparative as this approach is it highlights both common principles and aspects of human uniqueness with respect to cooperative behavior

Origins of Altruism and Cooperation Robert W. Sussman, C. Robert Cloninger, 2011-08-02 This book is about the evolution and nature of cooperation and altruism in social living animals focusing especially on non human primates and on humans Although cooperation and altruism are often thought of as ways to attenuate competition and aggression within groups or are related to the action of selfish genes there is increasing evidence that these behaviors are the result of biological mechanisms that have developed through natural selection in group living species This evidence leads to the conclusion that cooperative and altruistic behavior are not just by products of competition but are rather the glue that underlies the ability for primates and humans to live in groups The anthropological primatological paleontological behavioral neurobiological and psychological evidence provided in this book gives a more optimistic view of human nature than the more popular conventional view of humans being naturally and basically aggressive and warlike Although competition and aggression are recognized as an important part of the non human primate and human behavioral repertoire the evidence from these fields indicates that cooperation and altruism may represent the more typical normal and healthy behavioral pattern The book is intended both for the general reader and also for students at a variety of levels graduate and undergraduate it aims to provide a compact accessible and up to date account of the current scholarly advances and debates in this field of study and it is designed to be used in teaching and in discussion groups The book derived from a conference sponsored by N S F the Wenner Gren Foundation for Anthropological Research the Washington University Committee for Ethics and Human Values and the Anthropedia Foundation for the study of well being

The Oxford Handbook of International Human Rights Law Dinah Shelton, 2013-09 The Oxford Handbook of International Human Rights Law provides an authoritative and original overview of one of the key branches of international law Forty contributors comprehensively analyse the role of human rights in international law from a global perspective examining its origins and principles and measuring its impact on the world

Handbook of Neurosociology David D. Franks, Jonathan H. Turner, 2012-07-09 Until recently a handbook on neurosociology would have been viewed with skepticism by sociologists who have long been protective of their disciplinary domain against perceived encroachment by biology But a number of developments in the last decade or so have made sociologists more receptive to biological factors in sociology and social psychology Much of this has been encouraged by the coeditors of this volume David Franks and Jonathan Turner This new interest has been increased by the explosion of

research in neuroscience on brain functioning and brain environment interaction via new MRI technologies with implications for social and psychological functioning This handbook emphasizes the integration of perspectives within sociology as well as between fields in social neuroscience For example Franks represents a social constructionist position following from G H Mead s voluntaristic theory of the act while Turner is more social structural and positivistic Furthermore this handbook not only contains contributions from sociologists but leading figures from the psychological perspective of social neuroscience

The Calculus of Selfishness Karl Sigmund, 2016-05-31 This volume looks at social dilemmas where cooperative motivations are subverted and self interest becomes self defeating Sigmund a pioneer in evolutionary game theory uses simple and well known game theory models to examine the foundations of collective action and the effects of reciprocity and reputation

The New Evolutionary Sociology Jonathan Turner, Richard Machalek, 2018-03-09 For decades evolutionary analysis was overlooked or altogether ignored by sociologists Fears and biases persisted nearly a century after Auguste Comte gave the discipline its name as did concerns that its effect would only reduce sociology to another discipline whether biology psychology or economics Worse apprehension that the application of evolutionary theory would encourage heightened perceptions of racism sexism ethnocentrism and reductionism pervaded Turner and Machalek argue instead for a new embrace of biology and evolutionary analysis Sociology from its very beginnings in the early 19th century has always been concerned with the study of evolution particularly the transformation of societies from simple to ever more complex forms By comprehensively reviewing the original ways that sociologists applied evolutionary theory and examining the recent renewal and expansion of these early approaches the authors confront the challenges posed by biology neuroscience and psychology to distinct evolutionary approaches within sociology They emerge with key theoretical and methodological discoveries that demonstrate the critical and compelling case for a dramatically enriched sociology that incorporates all forms of comparative evolutionary analysis to its canon and study of sociocultural phenomena

The Oxford Handbook of Prosocial Behavior David A. Schroeder, William G. Graziano, 2015 The Oxford Handbook of Prosocial Behavior provides a comprehensive review of the current literature on when and why people act to benefit others It provides a comprehensive overview of the field to give both the casual reader and the neophyte to the field some perspective about fundamental questions what why when and who relative to prosocial behavior Taking a multi level approach the chapters represent the broad spectrum of this multi faceted domain Topics range from micro level analyses involving evolutionary and comparative psychological factors to macro level applications such as reducing intergroup conflicts and ethnic genocide Between these extremes the contributors all internationally recognized in their field offer their perspectives on developmental processes that may predispose individuals to empathize with and respond to the needs of others individual differences that seem to interact with situational demands to promote helping and the underlying motivations of those helping others They explain volunteerism intragroup cooperation and intergroup cooperation to move the analysis from the individual to group level

phenomena They extend the consideration of this topic to include support of pro environmental actions means to encourage participation in medical clinical trials and the promotion of world peace The ways that gender interpersonal relationships race and religion might affect decisions to give aid and support to others are also addressed The final chapter offers a unique view of prosocial behavior that encourages researchers and readers to take an even broader consideration of the field to search for a prosocial consilience

Conflict and Multimodal Communication Francesca D'Errico,Isabella Poggi,Alessandro Vinciarelli,Laura Vincze,2015-03-17 This book explores the use of technology to detect predict and understand social cues in order to analyze and prevent conflict Traditional human sciences approaches are enriched with the latest developments in Social Signal Processing aimed at an automatic understanding of conflict and negotiation Communication both verbal and non verbal within the context of a conflict is studied with the aim of promoting the use of intelligent machines that automatically measure and understand the escalation of conflict and are able to manage it in order to support the negotiation process Particular attention is paid to the integration of human sciences findings with computational approaches from the application of correct methodologies for the collection of valid data to the development of computational approaches inspired by research on verbal and multimodal communication In the words of the trade unionist Pierre Carniti We should reevaluate conflict since without conflict there is no social justice With this in mind this volume does not approach conflict simply as an obstacle to be overcome but as a concept to be fully analyzed The philosophical linguistic and psychological aspects of conflict once understood can be used to promote conflict management as a means for change and social justice

Mind the Gap Peter Kappeler,Joan Silk,2009-11-09 This volume features a collection of essays by primatologists anthropologists biologists and psychologists who offer some answers to the question of what makes us human i e what is the nature and width of the gap that separates us from other primates The chapters of this volume summarize the latest research on core aspects of behavioral and cognitive traits that make humans such unusual animals All contributors adopt an explicitly comparative approach which is based on the premise that comparative studies of our closest biological relatives the nonhuman primates provide the logical foundation for identifying human universals as well as evidence for evolutionary continuity in our social behavior Each of the chapters in this volume provides comparative analyses of relevant data from primates and humans or pairs of chapters examine the same topic from a human or primatological perspective respectively Together they cover six broad topics that are relevant to identifying potential human behavioral universals Family and social organization Predation pressure is thought to be the main force favoring group living in primates but there is great diversity in the size and structure of social groups across the primate order Research on the behavioral ecology of primates and other animals has revealed that the distribution of males and females in space and time can be explained by sex specific adaptations that are sensitive to factors that limit their fitness access to resources for females and access to potential mates for males

Learning from Animals? Louise S. Röska-Hardy,Eva M. Neumann-Held,2008-10-27 In Learning from

Animals experts present empirical research analyze issues raised by comparative approaches and debate their consequences for an understanding of human uniqueness Global Health Justice and Governance Dr. Prah Ruger, 2018-05-03 In a world beset by serious and unconscionable health disparities by dangerous contagions that can circle our globalized planet in hours and by a bewildering confusion of health actors and systems humankind needs a new vision a new architecture new coordination among renewed systems to ensure central health capabilities for all Global Health Justice and Governance lays out the critical problems facing the world today and offers a new theory of justice and governance as a way to resolve these seemingly intractable issues A fundamental responsibility of society is to ensure human flourishing The central role that health plays in flourishing places a unique claim on our public institutions and resources to ensure central health capabilities to reduce premature death and avoid preventable morbidities Faced with staggering inequalities imperiling epidemics and inadequate systems the world desperately needs a new global health architecture Global Health Justice and Governance lays out this vision *In Pursuit of Healthy Environments* Esa Ruuskanen, Heini Hakosalo, 2020-11-12 *In Pursuit of Healthy Environments* brings temporal depth to a highly topical issue the interaction between health and the environment By means of a rich set of historical case studies from Americas to Europe and from the tropics to the Arctic the volume demonstrates that the concern for creating and finding healthy environments is not a new one shows how the link between the environment and health has been perceived at different times and in different cultures and discusses the practical implications of these conceptualizations The book written by scholars from architecture cultural anthropology history Indigenous Studies media studies and sociology will be of interest to a reader interested in the historical roots of present health related environmental issues It discusses the spatiality and materiality of the conceptions of health and the practices of nurture in colonial and post colonial environments and shows how greatly indigenous and colonial mindsets have differed during the last 300 years It also investigates how certain environments have become labelled as healthy and life preserving while others stigmatized by death and disease and how fluctuating these notions can be Finally it analyses the materialities and immaterialities as well as the transgenerational and transboundary characters of environmental and medical knowledge *Evolutionary Biology and Conservation of Titis, Sakis and Uacaris* Adrian Barnett, 2013-04-11 The first detailed collation of the evolution ecology and conservation of some of South America s least known and most endangered primates *Advances in the Study of Behavior* H. Jane Brockmann, Timothy J. Roper, Marc Naguib, Katherine E. Wynne-Edwards, Chris Barnard, John Mitani, 2011-07-29 *Advances in the Study of Behavior* was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This volume makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields This volume reflects many of the current themes in animal behavior including the evolution of social behavior sexual selection and communication It also reflects controversial topics on which the authors provide

interesting new insights Advances in the Study of Behavior is now available online at ScienceDirect full text online from volume 30 onwards

Extraterrestrial Altruism Douglas A. Vakoch,2013-09-14 Extraterrestrial Altruism examines a basic assumption of the Search for Extraterrestrial Intelligence SETI that extraterrestrials will be transmitting messages to us for our benefit This question of whether extraterrestrials will be altruistic has become increasingly important in recent years as SETI scientists have begun contemplating transmissions from Earth to make contact Technological civilizations that transmit signals for the benefit of others but with no immediate gain for themselves certainly seem to be altruistic But does this make biological sense Should we expect altruism to evolve throughout the cosmos or is this only wishful thinking Is it dangerous to send messages to other worlds as Stephen Hawking has suggested or might humankind benefit from an exchange with intelligence elsewhere in the galaxy Would extraterrestrial societies be based on different ethical principles or would we see commonalities with Earthly notions of morality Extraterrestrial Altruism explores these and related questions about the motivations of civilizations beyond Earth providing new insights that are critical for SETI Chapters are authored by leading scholars from diverse disciplines anthropology astronomy biology chemistry computer science cosmology engineering history of science law philosophy psychology public policy and sociology The book is carefully edited by Douglas Vakoch Director of Interstellar Message Composition at the SETI Institute and professor of clinical psychology at the California Institute of Integral Studies The Foreword is by Frank Drake This interdisciplinary book will benefit everybody trying to understand whether evolution and ethics are unique to Earth or whether they are built into the fabric of the universe

Mammal Societies Tim Clutton-Brock,2016-04-25 The book aims to integrate our understanding of mammalian societies into a novel synthesis that is relevant to behavioural ecologists ecologists and anthropologists It adopts a coherent structure that deals initially with the characteristics and strategies of females before covering those of males cooperative societies and hominid societies It reviews our current understanding both of the structure of societies and of the strategies of individuals it combines coverage of relevant areas of theory with coverage of interspecific comparisons intraspecific comparisons and experiments it explores both evolutionary causes of different traits and their ecological consequences and it integrates research on different groups of mammals with research on primates and humans and attempts to put research on human societies into a broader perspective
