Composite Materials for Electronic Functions Deborah D. L. Chung, 2000 Composite materials are traditionally designed for the mechanical properties due to their structural applications However composite materials are increasingly used in non structural applications such as electronic packaging and thermal management Moreover structural composite materials that are multifunctional are increasingly

needed due to the demand of smart structures and the importance of weight saving As a consequence structural materials that can provide electronic functions are needed Thus electronic functions are desirable for both non structural and structural composite materials Directory of Published Proceedings ,1999 *Index of Conference Proceedings* British Library.
