Robust Regression and Outlier Detection Peter J. Rousseeuw, Annick M. Leroy, 2005-02-25 WILEY INTERSCIENCE PAPERBACK SERIES The Wiley Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation With these new unabridged softcover volumes Wiley hopes to extend the lives of these works by making them available to future generations of statisticians mathematicians and scientists The writing style is clear and informal and much of the discussion is oriented to application In short the book is a keeper Mathematical Geology I would highly recommend the addition of this book to the libraries of both students and professionals It is a useful textbook for the graduate student because it emphasizes both the philosophy and practice of robustness in regression settings and it provides excellent examples of precise logical proofs of theorems Even for those who are familiar with robustness the book will be a good reference because it consolidates the research in high breakdown affine equivariant estimators and includes an extensive bibliography in robust regression outlier diagnostics and related methods The aim of this book the authors tell us is to make robust regression available for everyday statistical practice Rousseeuw and Leroy have included all of the necessary ingredients to make this happen Journal of the American Statistical Association

Multiple Imputation for Nonresponse in Surveys Donald B. Rubin, 2009-09-25 Demonstrates how nonresponse in sample surveys and censuses can be handled by replacing each missing value with two or more multiple imputations Clearly illustrates the advantages of modern computing to such handle surveys and demonstrates the benefit of this statistical technique for researchers who must analyze them Also presents the background for Bayesian and frequentist theory After establishing that only standard complete data methods are needed to analyze a multiply imputed set the text evaluates procedures in general circumstances outlining specific procedures for creating imputations in both the ignorable and nonignorable cases Examples and exercises reinforce ideas and the interplay of Bayesian and frequentist ideas presents a

unified picture of modern statistics

Forecasting with Dynamic Regression Models Alan Pankratz, 2012-01-20 One of the most widely used tools in statistical forecasting single equation regression models is examined here A companion to the author's earlier work Forecasting with Univariate Box Jenkins Models Concepts and Cases the present text pulls together recent time series ideas and gives special attention to possible intertemporal patterns distributed lag responses of output to input series and the auto correlation patterns of regression disturbance It also includes six case studies

Fundamentals of Exploratory Analysis of Variance David C. Hoaglin, Frederick Mosteller, John W. Tukey, 2009-09-25 The analysis of variance is presented as an exploratory component of data analysis while retaining the customary least squares fitting methods Balanced data layouts are used to reveal key ideas and techniques for exploration The approach emphasizes both the individual observations and the separate parts that the analysis produces Most chapters include exercises and the appendices give selected percentage points of the Gaussian t F chi squared and studentized range distributions

Statistical Intervals Gerald J. Hahn, William Q. Meeker, 2011-09-28 Presents a detailed exposition of statistical intervals and emphasizes applications in industry The discussion differentiates at an elementary level among different kinds of statistical intervals and gives instruction with numerous examples and simple math on how to construct such intervals from sample data This includes confidence intervals to contain a population percentile confidence intervals on probability of meeting specified threshold value and prediction intervals to include observation in a future sample Also has an appendix containing computer subroutines for nonparametric statistical intervals
