Microorganisms are distributed across every ecosystem and microbial transformations are fundamental to the operation of the biosphere Microbial ecology is the study of this interaction between microorganisms and their environment and arguably represents one of the most important areas of biological research Yet for many years our study of microbial flora was severely limited the primary method of culturing microorganisms on media allowed us to study only between 0.1 and 10% of the total microbial flora in any given environment Molecular Microbial Ecology gives a comprehensive guide to the recent revolution in the study of microorganisms in the environment Details are given on molecular methods for isolating some of the previously uncultured and numerically dominant microbial groups PCR based approaches to studying prokaryotic systematics are described including ribosomal RNA analysis and stable isotope probing Later chapters cover DNA hybridisation techniques including fluorescent in situ hybridisation as well as genomic and metagenomic approaches to microbial ecology Gathering together some of the world's leading experts this book provides an invaluable introduction to the modern theory and molecular methods used in studying microbial ecology **Subject Guide to Books in Print**, 1996

Van Soest, 2018-09-05 This monumental text reference places in clear perspective the importance of nutritional assessments to the ecology and biology of ruminants and other nonruminant herbivorous mammals Now extensively revised and significantly expanded it reflects the changes and growth in ruminant nutrition and related ecology since 1982 Among the subjects Peter J Van Soest covers are nutritional constraints mineral nutrition rumen fermentation microbial ecology utilization of fibrous carbohydrates application of ruminant precepts to fermentive digestion in nonruminants as well as taxonomy evolution nonruminant competitors gastrointestinal anatomies feeding behavior and problems of animal size He also discusses methods of evaluation nutritive value physical structure and chemical composition of feeds forages and broses the effects of lignification and ecology of plant self protection in addition to metabolism of energy protein lipids control of feed intake mathematical models of animal function digestive flow and net energy Van Soest has introduced a number of changes in this edition including new illustrations and tables He places nutritional studies in historical context to show not only the effectiveness of nutritional approaches but also why nutrition is

of fundamental importance to issues of world conservation He has extended precepts of ruminant nutritional ecology to such distant adaptations as the giant panda and streamlined conceptual issues in a clearer logical progression with emphasis on mechanistic causal interrelationships Peter J Van Soest is Professor of Animal Nutrition in the Department of Animal Science and the Division of Nutritional Sciences at the New York State College of Agriculture and Life Sciences Cornell University
