

Presentation of FISH! Philosophy

- Show video and go over the four principles.
- What is The FISH! Philosophy? 4 simple, interconnected practices:
 1. **Be There** is being emotionally present for people. It's a powerful message of respect that improves communication and strengthens relationships.
 2. **Play** taps into your natural way of being creative, enthusiastic and having fun. Play is the spirit that drives the curious mind, as in "Let's play with that idea!" It's a mindset you can bring to everything you do.
 3. **Make Their Day** is finding simple ways to serve or delight people in a meaningful, memorable way. It's about contributing to someone else's life, not because you want something out of it, but because that's the person you want to be.
 4. **Choose Your Attitude** means taking responsibility for how you respond to what life throws at you. Once you are aware that your choice impacts everyone around you, you can ask yourself, "Is my attitude helping my team or my customers? Is it helping me to be the person I want to be?"
- Through The FISH! Philosophy, we build stronger relationships with the team members we work with, the customers we serve, the students we teach and the people we love.

Humans, Animals and Biopolitics Kristin Asdal, Tone Druglito, Steve Hinchliffe, 2016-07-01 Human animal co existence is central to a politics of life how we order societies and to debates about who we humans think we are In other words our ways of understanding and ordering human animal relations have economic and political implications and affect peoples everyday lives By bringing together historically oriented approaches and contemporary ethnographies which engage with science and technology

studies STS this book reflects the multi sited multi species multi logic and multiple ways in which lives are and have been assembled disassembled practised and possibly policed and politicized Instead of asking only how control and knowledge are and have been extended over life the chapters in this book also look at what happens when control fails at practices which defy orders escape detection fail to produce or only loosely hang together In doing so the book problematises and extends the Foucauldian notion of biopolitics that has been such a central analytical concept in studies of human animal relations and provides a unique resource of cases and theoretical refinements regarding the ways in which we live together with more than human others

Science from Sight to Insight Alan G. Gross, Joseph E. Harmon, 2013-11-25 John Dalton's molecular structures Scatter plots and geometric diagrams Watson and Crick's double helix The way in which scientists understand the world and the key concepts that explain it is undeniably bound up in not only words but images Moreover from PowerPoint presentations to articles in academic journals scientific communication routinely relies on the relationship between words and pictures In Science from Sight to Insight Alan G. Gross and Joseph E. Harmon present a short history of the scientific visual and then formulate a theory about the interaction between the visual and textual With great insight and admirable rigor the authors argue that scientific meaning itself comes from the complex interplay between the verbal and the visual in the form of graphs diagrams maps drawings and photographs The authors use a variety of tools to probe the nature of scientific images from Heidegger's philosophy of science to Peirce's semiotics of visual communication Their synthesis of these elements offers readers an examination of scientific visuals at a much deeper and more meaningful level than ever before

Spaces of Interaction, Places for Experience David Benyon, 2022-06-01 Spaces of Interaction Places for Experience is a book about Human Computer Interaction HCI interaction design ID and user experience UX in the age of ubiquitous computing The book explores interaction and experience through the different spaces that contribute to interaction until it arrives at an understanding of the rich and complex places for experience that will be the focus of the next period for interaction design The book begins by looking at the multilayered nature of interaction and UX not just with new technologies but with technologies that are embedded in the world People inhabit a medium or rather many media which allow them to extend themselves physically mentally and emotionally in many directions The medium that people inhabit includes physical and semiotic material that combine to create user experiences People feel more or less present in these

media and more or less engaged with the content of the media From this understanding of people in media the book explores some philosophical and practical issues about designing interactions The book journeys through the design of physical space digital space information space conceptual space and social space It explores concepts of space and place digital ecologies information architecture conceptual blending and technology spaces at work and in the home It discusses navigation of spaces and how people explore and find their way through environments Finally the book arrives at the concept of a blended space where the physical and digital are tightly interwoven and people experience the blended space as a whole The design of blended spaces needs to be driven by an understanding of the correspondences between the physical and the digital by an understanding of conceptual blending and by the desire to design at a human scale There is no doubt that HCI and ID are changing The design of microinteractions remains important but there is a bigger picture to consider UX is spread across devices over time and across physical spaces The commingling of the physical and the digital in blended spaces leads to new social spaces and new conceptual spaces UX concerns the navigation of these spaces as much as it concerns the design of buttons and screens for apps By taking a spatial perspective on interaction the book provides new insights into the evolving nature of interaction design

The Technical Image Horst Bredekamp, Vera Dünkel, Birgit Schneider, 2019-04-10 In science and technology the images used to depict ideas data and reactions can be as striking and explosive as the concepts and processes they embody both works of art and generative forces in their own right Drawing on a close dialogue between the histories of art science and technology The Technical Image explores these images not as mere illustrations or examples but as productive agents and distinctive multilayered elements of the process of generating knowledge Using beautifully reproduced visuals this book not only reveals how scientific images play a constructive role in shaping the findings and insights they illustrate but also however mechanical or detached from individual researchers choices their appearances may be how they come to embody the styles of a period a mindset a research collective or a device Opening with a set of key questions about artistic representation in science technology and medicine The Technical Image then investigates historical case studies focusing on specific images such as James Watson s models of genes drawings of Darwin s finches and images of early modern musical automata These case studies in turn are used to illustrate broad themes ranging from Digital Images to Objectivity and Evidence and to define and elaborate upon fundamental terms in the field Taken as a whole this collection will provide analytical tools for the interpretation and application of scientific and technological imagery

People and Computers XVIII - Design for Life Sally Fincher, Panos Markopoulos, David Moore, Roy Ruddle, 2007-03-11 The eighteenth annual British HCI Conference chose as its theme Design for Life Life has many facets from work of course or should we say inevitably to travel fun and other forms of leisure We selected 23 full papers out of 63 submitted which covered our interaction with computer systems in a variety of types of life situation including games tourism and certain types of work and also covered a variety of stages in our lives from the young to the elderly These papers were complemented by others

that described more traditional aspects of research in the field of human computer interaction In putting together the programme we followed a three stage process First each paper was reviewed by at least three reviewers Then a member of the committee conducted a meta review Finally all sets of reviews were considered by the technical chairs who assembled a programme that was submitted to and approved by the full committee This process was greatly assisted by the use of the Precision Conference Solutions web based submission system Even more important of course were the volunteer reviewers themselves In recognition this year we have made an award for the best reviewer as well as one for the best paper

Brown,Michael W. Corrigan,Ann Higgins-D'Alessandro,2012-10-12 Handbook of Prosocial Education is the definitive theoretical practical and policy guide to the prosocial side of education the necessary second side of the educational coin Academic teaching and learning are the first side of education however academic success depends upon the structures and support of prosocial educational efforts from promoting positive school climate to fostering student and teacher development to civic literacy and responsible and critical citizenship participation The Handbook of Prosocial Education chapters written by highly respected researchers and outstanding educators represent the wide range of research based prosocial interventions from pre school through high school The chapters explore and explain how prosocial education

helps teachers create effective classroom learning environments to support the development of the whole student principals encourage positive school climate and superintendents work to improve the health and well being of their systems As readers will learn when done well prosocial education develops the capacities and competencies of students teachers and school administrators that lead to a more autonomous positive self concept greater sense of purpose more socially responsible behaviors and increased connections between families schools and communities This book pulls together in one place for the first time the various threads that create the prosocial education tapestry making a compelling case for the necessity of changing national educational policy that continues to be ever more oriented to only the academic side of the educational coin thus jeopardizing the foundational and historic purpose of educating our children for their full human development and participation in our democracy **Crump** P.
