it is time to focus us on cold nuclear fusion We need to bomb the fuel with accelerated deuterium nuclei The fuel will be made from heavy water and lithium The optimal proportion of lithium will be tested It would be preferable to keep fuel in the plasma state Research into developing controlled thermonuclear fusion for civil purposes also began in earnest in the 1950s and it continues to this day Two projects the National Ignition Facility and ITER are in the process of reaching breakeven after 60 years of design improvements developed from previous experiments The best results were obtained with the Tokamak type installations Interesting Possibilities of Fusion--fission ,1974 **Fusion-Fission Blanket Options for the LIFE Engine** ,2010 **Alternative Sources of Energy** ,2013 **Nuclear Fusion** Henry Rainsford Hulme,Antony McB.
