Fixing Fuel Poverty Fixing Fuel Poverty:

Fixing Fuel Poverty Brenda Boardman, 2013-05-13 Since its publication in the early 90s Brenda Boardman's *Fuel Poverty* has been the reference text for those wishing to learn about this complex subject. In this its successor she turns a critical eye to the new millennium and finds that the situation while now more widely recognised is far from having improved. The book begins by discussing the political awakening to the issue and exploring just who constitutes the fuel poor. It examines the factors that contribute to fuel poverty: low incomes, high fuel prices and poor quality housing, and looks at and evaluates the policies that have been employed to help reduce the problem. The latter part presents a detailed set of proposals based around long-term improvements in the housing stock that must be employed if we are to avoid a dire situation continuing to get worse. Based on detailed analysis of the situation in the UK, the growth of fuel poverty, sometimes called energy poverty in other countries, and the new focus in European policy makes the book timely and provides important lessons for those who now have to produce policies to tackle the issues. Edgar Liu, Neil Simcock, Mari Martiskainen, 2022-03-10 **Urban Fuel Poverty** Kristian Fabbri, 2019-07-04 *Urban Fuel Poverty* describes key approaches to defining and alleviating fuel poverty in cities using a multidisciplinary perspective and multiple case studies. It provides empirical knowledge on the levels and intensities of energy poverty in urban areas along with new theoretical perspectives in conceptualizing the multidimensionality of energy poverty with special focus given to the urban environment. Chapters discuss what energy poverty is in terms of taxonomy, stakeholders and affected parties, addressing the role of the economy and energy bills, the role of climate and city factors, the role of buildings and the health and psychological impact on fuel poverty. The book addresses how to measure energy poverty, how to map it, and how to draw conclusions based on illness and social indicators. Finally, it explores measures to fight fuel poverty, including policy and governance actions, building efficiency improvements, and city planning. *Bridges* interdisciplinary divides between policy and economy, cities and buildings, and health and society. Addresses the physical performance of urban fuel poverty and their effect on thermal comfort and human health. Provides strategies and policies to mitigate energy and fuel poverty.

Transitions in Energy Efficiency and Demand Kirsten E.H. Jenkins, Debbie Hopkins, 2018-12-07 The Open Access version of this book is available at <http://www.tandfebooks.com/doi/view/10.4324/9781351127264> has been made available under a Creative Commons Attribution Non-Commercial No Derivatives 4.0 license. Meeting the goals enshrined in the Paris Agreement and limiting global temperature increases to less than 2°C above pre-industrial levels demands rapid reductions in global carbon dioxide emissions. Reducing energy demand has a central role in achieving this goal, but existing policy initiatives have been largely incremental in terms of the technological and behavioural changes they encourage. Against this background, this book develops a sociotechnical approach to the challenge of reducing energy demand and illustrates this with a number of empirical case studies from the United Kingdom. In doing so, it explores the emergence, diffusion, and impact

of low energy innovations including electric vehicles and smart meters The book has the dual aim of improving the academic understanding of sociotechnical transitions and energy demand and providing practical recommendations for public policy Combining an impressive range of contributions from key thinkers in the field this book will be of great interest to energy students scholars and decision makers

The Rebound Effect in Home Heating Ray Galvin, 2015-06-12 This is a definitive guide to the rebound effect in home heating the increase in energy service use after a technological intervention aimed at reducing consumption It sets out what the effect is how it plays out in the home heating sector what this implies for energy saving initiatives in this sector and how it relates to rebound effects in other sectors The book outlines how the concept of the rebound effect has been developed and the scope of research on it both generally and particularly in the home heating sector Within the context of energy and CO2 emissions policy it summarises the empirical evidence exploring its causes and the attempts that are being made to mitigate it Various definitions of the rebound effect are considered in particular the idea of the effect as an energy efficiency elasticity The book shows how this definition can be rigorously applied to thermal retrofits and to national consumption data to give logically consistent rebound effect results that can be coherently compared with those of other sectors and allow policy makers to have more confidence in the predictions about potential energy savings

Post-Socialist Urban Infrastructures (OPEN ACCESS) Tauri Tuvikene, Wladimir Sgibnev, Carola S. Neugebauer, 2019-05-15 Post Socialist Urban Infrastructures critically elaborates on often forgotten but some of the most essential aspects of contemporary urban life namely infrastructures and links them to a discussion of post socialist transformation As the skeletons of cities infrastructures capture the ways in which urban environments are assembled and urban lives unfold Focusing on post socialist cities marked by neoliberalisation polarisation and hybridity this book offers new and enriching perspectives on urban infrastructures by centering on the often marginalised aspects of urban research transport green spaces and water and heating provision Featuring cases from West and East alike the book covers examples from Azerbaijan Bulgaria Serbia Croatia Germany Russia Georgia Lithuania Poland the Czech Republic Tajikistan and India It provides original insights into the infrastructural back end of post socialist cities for scholars planners and activists interested in urban geography cultural and social anthropology and urban studies

The Oxford Handbook of Energy and Society Dr. Debra J. Davidson, Dr. Matthias Gross, 2018-07-11 The Oxford Handbook of Energy and Society presents an overview of this expanding area that has evolved dramatically over the past decade away from one largely dominated by structural political economic treatments on the one hand and social psychological studies of individual level attitudes and behaviors on the other toward a far more conceptually and methodologically rich and exciting field that brings in for example social practices system complexity risk theory social studies of science and social movements theories This volume seeks to capture the variety of scales and methods and range of both conceptual and empirical analyses that define the field while drawing particular

attention to indigenous peoples poverty political power communities and cities Organized into seven sections chapters cover social theory and energy society relations political economic perspectives consumption dynamics energy equity and energy poverty energy and publics energy and governance as well as emerging trends Energy Justice in a Changing Climate Karen Bickerstaff, Gordon Walker, Harriet Bulkeley, 2013-10-10 Energy justice is one of the most critical and yet least developed concepts associated with sustainability Much has been written about the sustainability of low carbon energy systems and policies with an emphasis on environmental economic and geopolitical issues However less attention has been directed at the social and equity implications of these dynamic relations between energy and low carbon objectives the complexity of injustice associated with whole energy systems from extractive industries through to consumption and waste that transcend national boundaries and the social political economic and material processes driving the experience of energy injustice and vulnerability Drawing on a substantial body of original research from an international collaboration of experts this unique collection addresses energy poverty just innovation aesthetic justice and the justice implications of low carbon energy systems and technologies The book offers new thinking on how interactions between climate change energy policy and equity and social justice can be understood and develops a critical agenda for energy justice research **Eco-Homes** Doctor Jenny Pickerill, 2016-01-15 It is widely understood that good affordable eco housing needs to be at the heart of any attempt to mitigate or adapt to climate change This is the first book to comprehensively explore eco housing from a geographical social and political perspective It starts from the premise that we already know how to build good eco houses and we already have the technology to retrofit existing housing Despite this relatively few eco houses are being built Featuring over thirty case studies of eco housing in Britain Spain Thailand Argentina and the United States Eco Homes examines the ways in which radical changes to our houses such as making them more temporary using natural materials or relying on manual heating and ventilation systems require changes in how we live As such it argues it is not lack of technology or political will that is holding us back from responding to climate change but deep rooted cultural and social understandings of our way of life and what we expect our houses to do for us *Energy Policy Making in the EU* Jale Tosun, Sophie Biesenbender, Kai Schulze, 2015-01-05 The book adopts an innovative analytical approach to agenda setting by not only presenting successful cases in which energy issues were addressed by means of public policy but by also analyzing failed attempts to make issues part of the European policy agenda Another outstanding feature of the book is its use of the latest empirical data on a broad range of energy issues When are energy issues likely to find their way to the agenda of European policymakers This is the key research question guiding this collection of empirical studies which will shed light on both successful and unsuccessful attempts to include energy issues in the European agenda The multi level political system of the European Union represents a particularly fruitful setting for addressing this question due to the multiple institutional access points it provides for different groups of actors The book has three key benefits First it provides a theory informed

analysis of agenda setting processes in general and in the European Union in particular Second it presents an overview of the most important and emerging dimensions on European energy policy and third it helps to develop a research agenda for future research in the field

The Future of Electricity Demand Tooraj Jamasb, Michael G. Pollitt, 2011-09-15 What will electricity and heat demand look like in a low carbon world Ambitious environmental targets will modify the shape of the electricity sector in the twenty first century Smart technologies and demand side management will be some of the key features of the future of electricity systems in a low carbon world Meanwhile the social and behavioural dimensions will complement and interact with new technologies and policies Electricity demand in the future will increasingly be tied up with the demand for heat and for transport The Future of Electricity Demand looks into the features of the future electricity demand in light of the challenges posed by climate change Written by a team of leading academics and industry experts the book investigates the economics technology social aspects and policies and regulations which are likely to characterize energy demand in a low carbon world It provides a comprehensive and analytical perspective on the future of electricity demand

The Thread of Energy Martin J. Pasqualetti, 2021-12-03 Energy weaves the tapestry of our lives and it does so in more ways than we usually recognize While it is clear that it powers our homes airplanes and factories its overwhelming influence often goes without notice in other areas from the heartbreak of poverty to the motivation for war While maintaining its availability has the potential to create jobs and contribute to competitive economies nonrenewable energy sources are scarring our landscapes polluting our air and fouling our water Understanding how we use energy and what we are willing to do to maintain our access to it can help us prepare for the complex and daunting challenges that linger as we look for alternatives In The Thread of Energy Martin J Pasqualetti homes in on this vital driver of human actions and decisions He exposes the impact of energy according to multiple scales of measurement and assessment from everyday applications to global entanglements The book traces our increasing dependence on Earth s nonrenewable energy resources by comparing lifestyle changes throughout history Pasqualetti showcases the many ways energy infiltrates communication methods in all its forms e g print visuals digital etc The final chapters detail various approaches used by democratic societies looking to lessen their energy usage including the critical importance of environmentally conscious policymakers The Thread of Energy treats energy as a social issue with a technical component rather than the other way around

Infrastructure Development Strategies for Empowerment and Inclusion Baporikar, Neeta, 2024-06-17 Despite its crucial role in economic growth and societal development infrastructure projects often fail to reach their full potential In many cases the benefits of infrastructure development do not trickle down to the most vulnerable populations exacerbating inequalities and limiting overall impact Additionally the design and implementation of infrastructure reforms can sometimes worsen environmental pressures and spatial insecurity highlighting the need for strategic approaches to infrastructure development Infrastructure Development Strategies for Empowerment and Inclusion offers a comprehensive solution to these challenges

By delving into a broad range of ideas strategies and case studies this book provides valuable insights for academics researchers practitioners and policymakers It examines how infrastructure projects can be designed and implemented to empower marginalized groups foster inclusivity and stimulate equitable economic growth thus maximizing their impact

State-of-the-Art Indonesia Energy Transition Dinita Setyawati,2023-06-03 This book discusses how people can come together to address current energy justice and access poverty problems by examining the relationship between energy systems and society in diverse energy sources The novelty of this book is that this is the only complete guide for readers who wish to understand the status of Indonesia s energy transition and renewable energy development Energy programs that are explored are the ones prioritized by government administrations including coal nuclear power solar energy green electricity and geothermal energy Based on extensive fieldwork and empirical data the book combines insights from historical data on energy subsidies and economic diversification current empirical data on social acceptance of new energy technologies and contemporary studies that forecast the implications of the transition to the coal industry and fossil fuel subsidies It asks how Indonesia has enacted policies that support energy transition How do the public and civil society view those policies What are the implications for broader themes and discussions on energy sources technology systems policies and service Strategies are suggested to advance a sustainable transition in the developing world that will mitigate developmental risks associated with the transition away from fossil fuels while encouraging decision making in a sustainable and socially just manner This book is an informative and engaging read for a general audience as well as a valuable resource for scholars researchers and students in environmental and energy studies

Powerless Diana Hernández,Jennifer Laird,2025-04-08 Energy serves as the lifeblood of our daily experiences It permeates virtually every aspect of our existence facilitating nourishment safety and productivity When affordability threatens energy s availability a family s living situation can become untenable too cold too hot too dark and too often unhealthy and unsafe In *Powerless* sociologists Diana Hernández and Jennifer Laird reveal the hidden hardship of energy insecurity the inability to adequately meet household energy needs Approximately one in ten households in the U S are energy insecure and four in ten are at risk for energy insecurity These statistics alone do not convey the acute pain of utility shutoffs or the relentless toll of chronic energy hardships marked by difficult choices and harsh living conditions Drawing on survey data and interviews with one hundred energy insecure individuals and families Hernández and Laird detail the experience of energy insecurity Individuals and families suffering from energy insecurity endure economic hardships such as difficulty paying utility bills utility debt and disconnection from utility services They also struggle with physical challenges such as poor housing conditions and poor or dysfunctional heating and cooling systems They are often forced to make difficult choices about what bills to pay These decisions are sometimes referred to as heat or eat choices as families cannot afford to pay for heating and food at the same time Energy insecure individuals and families employ a variety of strategies to keep energy costs down to avoid having to make these hard choices

This includes deliberate underconsumption of energy enduring physical discomfort and using dangerous alternatives such as open flames ovens or space heaters to try to maintain a comfortable temperature in their home To be energy insecure is to suffer Despite the heavy toll of energy insecurity most people confront these difficulties behind closed doors believing it is a private matter Thus the enormous social crisis of energy insecurity goes unnoticed Hern ndez and Laird argue that household energy is a basic human right and detail policies and practices that would expand access to consistent safe clean and affordable energy Their proposals include improving the current energy safety net which is limited and often does not serve the most energy insecure due to stringent program requirements and administrative burdens They also suggest redesigning rates to accommodate income promoting enrollment and expansion of discount programs reforming utility disconnection policies improving energy literacy and ensuring an equitable shift to renewable energy resources Powerless creates a comprehensive picture of the complex social and environmental issue of energy insecurity and shows how energy equity is not just an aspiration but an achievable reality

Removing Barriers to Environmental Comfort in the Global South

Laura Marín-Restrepo,Alexis Pérez-Fargallo,María Beatriz Piderit-Moreno,Maureen Trebilcock-Kelly,Paulina Wegertseder-Martínez,2023-05-11 This book describes how comfort energy and climate change in developing countries and vulnerable sectors of the population relate to buildings The building sector is currently facing significant challenges connected to energy consumption energy poverty and climate change effects When studied in developing countries and vulnerable sectors of the population these factors which are commonplace in the tropics and the southern hemisphere are interlinked and share a critical component environmental comfort Although progress has been made in environmental comfort through research and the development of standards and policies at the international level in the Global South where the countries with the highest levels of income inequality are concentrated environmental comfort has its own characteristics and challenges that prevent a clear understanding from the established vision of the Global North This book presents research theories and techniques related to Thermal comfort Indoor air quality Visual comfort and Acoustic comfort and its relationship with energy use and energy efficiency seeking to address different barriers to environmental comfort It shows how to improve the way buildings are designed and operated to promote healthier environmental conditions and more sustainable construction by presenting studies and reflections carried out in the target geographical area the Global South In this way this book contributes to developing the concept of environmental comfort visualising how progress has been made in understanding it from a tropical and southern perspective and posing common challenges The book is intended for engineers architects and researchers of the built environment who are interested in environmental comfort and its influence on energy consumption energy poverty and other related factors in the Global South context It is also a useful resource for decision makers and public policy developers concerned with the indoor comfort of buildings Moreover the book aims to provide guidance for those in developing countries by gathering existing knowledge in the field for the tropics and southern

hemisphere climatic and sociocultural contexts allowing us to move forward in this subject with actions and proposed solutions that fit our particular needs
