Modeling and Simulation of Logistics Flows 3 Jean-Michel Réveillac, 2017-04-03 Volume 3 begins with an introduction to which are added four chapters focused on modeling and flow simulation in an environment in 2 or 3 dimensions 2D or 3D They deal with different cases taken from situations found in the field A conclusion comes close this third book The different software used in this third volume Computer simulation of discrete flows Mixed flow simulation Flows in 3D and the evacuation simulation Flows in 3D for conveying and storage The conclusion discusses the future developments of the software and their integration into society At the end of each volume is a bibliography and a list of web links There is also a glossary explaining some abbreviations acronyms and some very specific terminology of logistics and operations research

FlexSim in Academe: Teaching and Research Pawel Pawlewski, Patrycja Hoffa-Dabrowska, Paulina Golinska-Dawson, Karolina Werner-Lewandowska, 2019-01-29 This book describes a variety of teaching and academic research applications that effectively utilize FlexSim to 1 provide guidelines methods and tools for simulation modeling and analysis in a variety of educational settings and 2 address a variety of important design and operational issues in industry Simulation is increasingly proving to be an important tool for supporting decision making and problem solving processes in many disparate domains including the design management and improvement of a wide range of operations systems in manufacturing logistics healthcare etc Achieving resource efficiency and minimizing negative externalities from operations represent two of today's greatest challenges modern simulation methods can help to overcome them FlexSim is a prominent software package for developing discrete event agent based continuous and hybrid simulations

Advances in Artificial Systems for Logistics Engineering IV Zhengbing Hu, Qingying Zhang, Matthew He,2024-10-01 The book comprises high quality refereed research papers presented at the 4th International Conference on Artificial Intelligence and Logistics Engineering ICAILE2024 held in Guiyang China on April 16 17 2024 was organized jointly by Wuhan University of Technology the National Technical University of Ukraine Igor Sikorsky Kyiv Polytechnic Institute the Polish Operational and Systems Society Wuhan Technology and Business University Guizhou Vocational and Technical College of Transportation and the International Research Association of Modern Education and Computer Science The topics discussed in the book include state of the art papers in artificial intelligence and logistics engineering It is an excellent source of references for researchers graduate students engineers management practitioners and undergraduate students interested in artificial intelligence and its applications in logistics engineering **Distributed and Parallel Computing**

Michael Hobbs, Andrzej Goscinski, Wanlei Zhou,2005-10-13 There are many applications that require parallel and distributed processing to allow complicated engineering business and research problems to be solved in a reasonable time Parallel and distributed processing is able to improve company profit lower costs of design production and deployment of new technologies and create better business environments The major lesson learned by car and aircraft engineers drug manufacturers genome researchers and other specialist is that a computer system is a very powerful tool that is able to help them solving even more complicated problems That has led computing specialists to new computer system architecture and

exploiting parallel computers clusters of clusters and distributed systems in the form of grids There are also institutions that do not have so complicated problems but would like to improve profit lower costs of design and production by using parallel and distributed processing on clusters In general to achieve these goals parallel and distributed processing must become the computing mainstream This implies a need for new architectures of parallel and distributed systems new system management facilities and new application algorithms This also implies a need for better understanding of grids and clusters and in particular their operating systems scheduling algorithms load balancing heterogeneity transparency application deployment which is of the most critical importance for their development and taking them by industry and business
