Intelligent Data-Driven Modelling and Optimization in Power and Energy Applications B Rajanarayan

Prusty, Neeraj Gupta, Kishore Bingi, Rakesh Sehgal, 2024-05-09 This book provides a comprehensive understanding of how intelligent data driven techniques can be used for modelling controlling and optimizing various power and energy applications It aims to develop multiple data driven models for forecasting renewable energy sources and to interpret the benefits of these techniques in line with first principles modelling approaches By doing so the book aims to stimulate deep insights into computational intelligence approaches in data driven models and to promote their potential applications in the power and energy sectors Its key features include an exclusive section on essential preprocessing approaches for the data driven model a detailed overview of data driven model applications to power system planning and operational activities specific focus on developing forecasting models for renewable generations such as solar PV and wind power and showcasing the judicious amalgamation of allied mathematical treatments such as optimization and fractional calculus in data driven model based frameworks This book presents novel concepts for applying data driven models mainly in the power and energy sectors and is intended for graduate students industry professionals research and academic personnel *Applied Computing*, 1994 Proceedings of the Third IEEE Conference on Fuzzy Systems, 1994 *Computers in Education Journal*, 1996 *Proceedings of the Third IEEE Conference on Fuzzy Systems* IEEE Neural Networks Council, 1994 Fuzzy Theory Systems Cornelius T. Leondes, 1999 Applications of fuzzy theory often referred to as fuzzy logic are maturing and multiplying at a phenomenal rate and a comprehensive treatment of these real world techniques and applications is now very timely Unlike traditional computer logic involving clear true or false decisions a fuzzy logic system chooses what is most true after considering several contributing and possibly conflicting variables Examples of practical devices using fuzzy computer decision making are thermostats that respond to a combination of temperature and humidity comfort factors an elevator that considers how crowded a car is rather than just its proximity to the desired floor and a camera that integrates the variables affecting picture quality These volumes will present a logical progression from implementation and modeling techniques to industrial commercial applications to fuzzy neural and adaptive fuzzy systems **Managing Energy Security** Maria G. Burns, 2019-03-29 This interdisciplinary book is written for government and industry professionals who need a comprehensive accessible guide to modern energy security Introducing the ten predominant energy types both renewable and non renewable the book illustrates the modern energy landscape from a geopolitical commercial economic and technological perspective Energy is presented as the powerhouse of global economic activities To ensure the uninterrupted supply of energy nations industries and consumers need to have options Efficient energy security planning ensures that when a primary energy source is depleted compromised or interrupted an alternative energy source must be readily available For this reason the foundations of energy security are built upon the five pillars of Sustainability Independence Efficiency

Affordability and Accessibility The numerous case studies presented in this book demonstrate that energy security may be compromised in the absence of one out of these five ingredients The book also entertains the Triple E notion of Energy Efficiency Environmental integrity and Economies of scale used by governments and corporations for energy optimization One of the key strengths of the book is its ability effectively to cover various scientific disciplines and several energy types while remaining comprehensible This book will be of much interest to security or logistics professionals economists and engineers as well as policymakers
