Wayne Padgett, David Anderson, 2022-06-01 This book is intended to fill the gap between the ideal precision digital signal processing DSP that is widely taught and the limited precision implementation skills that are commonly required in fixed point processors and field programmable gate arrays FPGAs These skills are often neglected at the university level particularly for undergraduates We have attempted to create a resource both for a DSP elective course and for the practicing

engineer with a need to understand fixed point implementation Although we assume a background in DSP Chapter 2 contains a review of basic theory and Chapter 3 reviews random processes to support the noise model of quantization error Chapter 4 details the binary arithmetic that underlies fixed point processors and then introduces fractional format for binary numbers Chapter 5 covers the noise model for quantization error and the effects of coefficient quantization in filters Because of the numerical sensitivity of IIR filters they are used extensively as an example system in both Chapters 5 and 6 Fortunately the principles of dealing with limited precision can be applied to a wide variety of numerically sensitive systems not just IIR filters Chapter 6 discusses the problems of product roundoff error and various methods of scaling to avoid overflow Chapter 7 discusses limit cycle effects and a few common methods for minimizing them There are a number of simple exercises integrated into the text to allow you to test your understanding Answers to the exercises are included in the footnotes A number of MATLAB examples are provided in the text They generally assume access to the Fixed Point Toolbox If you lack access to this software consider either purchasing or requesting an evaluation license from The Mathworks The code listed in the text and other helpful MATLAB code is also available at <http://www.morganclaypool.com/page/padgett> and <http://www.rosehulman.edu/padgett/fpsp> You will also find MATLAB exercises designed to demonstrate each of the four types of error discussed in Chapters 5 and 6 Simulink examples are also provided on the web site
