Isabel Balteiro, 2006 This work intends to provide new insights on a controversial word formation phenomenon or process known as conversion or zero derivation It offers a critical review of previous theories and approaches to this subject but it also attempts to provide a new definition discusses the appropriateness of using one term or the other to name the phenomenon and identifies its main characteristics For doing so it discusses issues such as whether 1 the category or word class change is a strictly necessary condition 2 priority is to be given to the syntactic function or rather to the change of word class and 3 the result of the process is a derived word two different and independent units or rather one form with two clearly differentiated units Moreover this study delimits conversion versus other linguistic phenomena with apparently similar results levelling ellipsis shortening among others and discusses its different types or classifications partial and total conversion and change of secondary word class The conclusion is that despite the appearance of being a jack in the box or a dumping ground in which any linguistic process involving two formally identical elements may be included conversion can be both delimited and distinguished from other phenomena with apparent similar results The book has been awarded the national prize Leocadio Mart n Mingorance de Lengua y Ling stica inglesas XII edici n the English Language and Linguistics
