*Python Scripting for Computational Science* Hans Petter Langtangen, 2013-03-14 The primary purpose of this book is to help scientists and engineers working intensively with computers to become more productive have more fun and increase the reliability of their investigations Scripting in the Python programming language can be a key tool for reaching these goals 27 29 The term scripting means different things to different people By scripting I mean developing programs of an administering nature mostly to organize your work using languages where the abstraction level is higher and programming is more convenient than in Fortran C C or Java Perl Python Ruby Scheme and Tcl are examples of languages supporting such high level programming or scripting To some extent Matlab and similar scientific

computing environments also fall into this category but these environments are mainly used for computing and visualization with built in tools while scripting aims at gluing a range of different tools for computing visualization data analysis file directory management user interfaces and Internet communication So although Matlab is perhaps the scripting language of choice in computational science today my use of the term scripting goes beyond typical Matlab scripts Python stands out as the language of choice for scripting in computational science because of its very clean syntax rich modularization features good support for numerical computing and rapidly growing popularity What Scripting is About *B Vitamins and Folate* Victor R. Preedy, 2013 Written by an expert team this research compilation provides a fascinating insight into the scientific knowledge around these compounds for health and nutritional scientists
