1. 4.72 Concussions and Brain Size. In this exercise, we test for evidence that average brain size is larger in football players who have never had a concussion (*FBNoConcuss*) than in football players with a history of concussions (*FBConcuss*). The data are in *FootballBrain2* where the variable *Hipp* measures brain size as the volume of the hippocampus (in μL) for each subject.

- a. Define the parameter(s) for this question, using appropriate notation.

$$\mu_{nc} - \mu_c$$

- b. Write the null and alternative hypotheses in terms of the parameter(s) above.

$$H_0 = \mu_{nc} = \mu_c \quad \text{or} \quad H_0 = \mu_{nc} - \mu_c = 0$$

$$H_a = \mu_{nc} > \mu_c \quad H_a = \mu_{nc} - \mu_c > 0$$

$$H_a: \mu_c - \mu_{nc}$$

- c. Use *StatKey* to find the value of the relevant sample statistic. Write it using correct notation.

$$\bar{x}_1 - \bar{x}_2 = 724.600$$

- d. Use *StatKey* to find the p-value for your hypotheses. Include a screenshot of the randomization with tail area with your homework submission, and write the p-value here.

$$P\text{-value} = 0.00 = 0.0013 \sim 13\%$$

- e. Interpret the p-value in the terms of random chance, and in the context of brain size and concussions.

We have statistically significant evidence p-value at 0.00. The average brain size is larger in football players who have never had a concussion. (we have a 0.0013% chance of getting a statistic as or more extreme than the one we got - assuming that the null hypothesis is true.)

State the conclusion of the test in context, using nontechnical language. Include wording about the strength of the evidence against H_0 .

Because $p < .05$, we reject the null hypothesis and conclude that football players without a concussion have a larger average brain size than football players with a concussion.

Statistics Zealure C. Holcomb,2016-10-04 Students get valuable practice in interpreting statistical reporting as it actually appears in journals In each of the 62 exercises your students will read a brief excerpt of statistical reporting from a published research article Each exercise begins with guidelines for interpreting the statistics in the excerpt The questions on the excerpts promote learning by requiring students to interpret information in tables and figures perform simple calculations to further their interpretations critique data reporting techniques and evaluate procedures used to collect data Each exercise covers a limited number of statistics making it easy for you to coordinate the exercises with lectures and a main textbook The questions in each exercise are divided into two parts 1 Factual Questions and 2 Questions for Discussion The factual questions require careful reading for details while the discussion questions show students that interpreting statistics is more than a mathematical exercise These questions require them to apply good judgment as well as statistical reasoning in

arriving at appropriate interpretations Thirteen new exercises interspersed throughout show how to interpret a greater array of statistical reporting
