Elementary Statistics Robert Johnson, 2010 Data-driven Methods for Fault Localization in Process Technology
Kuehnert, Christian, 2013-10-24 Control systems at production plants consist of a large number of process variables. When detecting abnormal behavior, these variables generate an alarm. Due to the interconnection of the plant's devices, the fault can lead to an alarm flood. This again hides the original location of the causing device. In this work, several data-driven approaches for root cause localization are proposed, compared, and combined. All methods analyze disturbed process data for backtracking the propagation path.
