*Elementary Numerical Computing with Mathematica* Robert D. Skeel, Jerry B. Keiper, 1993-03 This is the instructor's manual to a text which introduces numerical methods at an elementary level. The main text exposes students to a range of possibilities for scientific computing. Although oriented towards Mathematica, the book can be used with other programming languages. It contains lessons on Mathematica but also assumes reasonable access to the Mathematica manual. Avoiding partial derivatives which many students study but fail to master, it covers systems of ordinary differential equations to give the student an accurate picture of scientific computing.

**Computer Science with MATHEMATICA®** Roman Maeder, Roman E. Maeder, 2000-02-28 This introductory course shows scientists and engineers how Mathematica can be used to do scientific computations.

**Computer Algebra in Scientific Computing CASC 2001** Viktor G. Ganzha, Ernst W. Mayr, Evgenii V. Vorozhtsov, 2012-12-06 CASC 2001 continues a tradition started in 1998 of international conferences on the latest advances in the application of computer algebra systems to the solution of various problems in scientific computing. The three earlier CASCs in this sequence CASC 98, CASC 99 and CASC 2000 were held in Petersburg, Russia; in Munich, Germany; and in Samarkand, Uzbekistan, respectively, and proved to be very successful. We have to thank the program committee listed overleaf for a tremendous job in soliciting and providing reviews for the submitted papers. There were more than three reviews per submission on average. The result of this job is reflected in the present volume which contains revised versions of the accepted papers. The collection of papers included in the proceedings covers various topics of computer algebra: methods, algorithms, and software applied to scientific computing. In particular, five papers are devoted to the implementation of the analysis of involutive systems with the aid of CASs. The specific examples include new efficient algorithms for the computation of Janet bases for monomial ideals, involutive division, involutive reduction method, etc. A number of papers deal with application of CASs for obtaining and validating new exact solutions to initial and boundary value problems for partial differential equations in mathematical physics. Several papers show how CASs can be used to obtain analytic solutions of initial and boundary value problems for ordinary differential equations and for studying their properties.
