Bemis,1911 **Commercial Fishing on the Outer Banks** R. Wayne Gray and Nancy Beach Gray,2019 Fishing on the Outer Banks for subsistence began over 1 000 years ago with the Algonquin Indians who made their summer camps on the islands They came for the seafood and learned how to fish for various species during each season Some of their fishing methods are still used by local watermen The early settlers to the area were also fishers for sustenance It was not until the Civil War however when they became commercial fishermen Historic shad runs combined with the building of infrastructure such as an ice plant roads and bridges finally made possible the exportation of their catches to northern markets In the 1950s tourists started trickling in and restaurants began dotting the landscape promoting the consumption of fresh seafood Today in an economy ruled by tourism fishing for profit still plays a strong role What began in the 1660s with a shipment of 80 barrels of whale oil has continued to the present with internationally coveted catches of bluefin tuna Although the fishing industry is threatened today as never before commercial fishermen will continue to develop new markets and fight for their livelihoods **Commercial Fisheries Review** ,1973

Department of Public Instruction,1920 General and Applied Aspects of Halophilic Microorganisms Francisco Rodriguez-Valera,2012-12-06 During recent years the subject of extreme environments and extremophiles has become a central topic in modern Biology The capability of some microorganisms to withstand and often prefer the harsh conditions found in such environments is helping to define the physico chemical limits of life and in consequence its essential nature Halophiles are one of the most representative types of extremophiles requiring high concentrations of inorganic salts mostly sodium chloride to grow and survive They inhabit hypersaline environments the distribution and abundance of which during geological eras are attested by the vast amounts of evaporite rocks present in the Earth crust and by their role in the generation of petroleum deposits The conditions of high osmolarity and ionic strength that are concomitant with concentrated salt solutions challenge the stability of lipid bilayers and the structure of proteins forcing halophilic microbes to develop specialized molecules and physiological mechanisms to cope with this environmental stress Even so halophilism is a widespread trait in the microbial world All the major groups of eucaryotic microbes two groups of archaeobacteria and most phylogenetic branches of eubacteria have halophilic representatives Therefore the study of halophilic microorganisms is indeed a highly heterogeneous and extensive topic The present volume contains the contributions to the FEMS NATO Advanced Research Workshop on General and Applied Aspects of Halophilic Microorganisms held at Alicante Spain September 17 22 1989 **Report to the United States Senate on Subsidies and Bounties to Fisheries Enterprises by Foreign Governments** United States Tariff Commission,1936
