Five Architects Museum of Modern Art (New York, N.Y.), 1975 Five Architects originally published in 1975 grew out of a meeting of the CASE group Conference of Architects for the Study of the Environment held at the Museum of Modern Art in 1969 The purpose of this gathering was to exhibit and criticize the work of five architects Eisenman Graves Gwathmey Hejduk and Meier who constituted a New York school and who are now among the most influential architects working today The buildings shown here have more diversity than one might expect from a school but share certain properties of form scale and treatment of material Collectively their work makes a modest claim it is only architecture not the salvation of man and the redemption of the earth Providing complete drawings and photographic documentation this collection also includes a comparative critique by Kenneth Frampton an Introduction by Colin Rowe that suggests a still broader context for the work as a whole and two short texts in which individual positions are outlined Now back in print Five Architects serves as a reference to the early work of some of America's most important architects and provides us with a glimpse back at the direction of architecture as they saw it over twenty years ago 5 Architects, 1972 **Five Architects: Eisenman, Graves, Gwathmey, Hejduk, Meier**, 1975 Five Architects, 1977 Five Architects Conference of Architects for the Study of the Environment, 1971 Five Architects : Eisenman, Graves, Gwathmey, Hejduk, Meier Colin Rowe, 1975 **The Fractal Dimension of Architecture** Michael J. Ostwald, Josephine Vaughan, 2016-09-01 Fractal analysis is a method for measuring analysing and comparing the formal or geometric properties of complex objects In this book it is used to investigate eighty five buildings that have been designed by some of the twentieth century's most respected and celebrated architects Including designs by Le Corbusier Eileen Gray Frank Lloyd Wright Robert Venturi Frank Gehry Peter Eisenman Richard Meier and Kazuyo Sejima amongst others this book uses mathematics to analyse arguments and theories about some of the world's most famous designs Starting with 625 reconstructed architectural plans and elevations and including more than 200 specially prepared views of famous buildings this book presents the results of the largest mathematical study ever undertaken into architectural design and the largest single application of fractal analysis presented in any field The data derived from this study is used to test three overarching hypotheses about social stylistic and personal trends in design along with five celebrated arguments about twentieth century architecture Through this process the book offers a unique mathematical insight into the history and theory of design The Architecture of Influence Amanda Reeser Lawrence, 2023-11-21 How do we create the new from the old The Architecture of Influence explores this fundamental question by analyzing a broad swath of twentieth century architectural works including some of the best known examples of the architectural canon modern and postmodern through the lens of influence The book serves as both a critique of the discipline's long standing focus on genius and a celebration of the creative act of revisioning and reimagining the past It argues that all works of architecture not only depend on the past but necessarily alter rewrite and reposition the traditions

and ideas to which they refer Organized into seven chapters Replicas Copies Compilations Generalizations Revivals Emulations and Self Repetitions the book redefines influence as an active process through which the past is defined recalled and subsequently redefined within twentieth century architecture

An Introduction to Architectural Theory Harry Francis Mallgrave, David J. Goodman, 2011-03-16 A sharp and lively text that covers issues in depth but not to the point that they become inaccessible to beginning students An Introduction to Architectural Theory is the first narrative history of this period charting the veritable revolution in architectural thinking that has taken place as well as the implications of this intellectual upheaval The first comprehensive and critical history of architectural theory over the last fifty years surveys the intellectual history of architecture since 1968 including criticisms of high modernism the rise of postmodern and poststructural theory critical regionalism and tectonics Offers a comprehensive overview of the significant changes that architectural thinking has undergone in the past fifteen years Includes an analysis of where architecture stands and where it will likely move in the coming years

Mathematical Thinking and Properties in Architecture Ju Hyun Lee, Michael J. Dawes, Michael J. Ostwald, 2025-06-30 This monograph explores the profound connections between architecture and mathematics through the works of Andrea Palladio Le Corbusier and Peter Eisenman Combining historical insights with computational analyses it examines the social spatial and aesthetic properties of twenty six iconic designs Advanced methods such as Space Syntax isovists fractal analysis image segmentation and semantic linguistic analysis reveal the mathematical principles underlying architectural thinking and properties Richly illustrated with over 100 visuals this volume is an essential resource for senior undergraduates postgraduates practicing architects and historians seeking a deeper understanding of mathematical thinking in architectural design and analysis

Architecture Thinking across Boundaries Rajesh Heynickx, Ricardo Costa Agarez, Elke Couchez, 2021-01-14 While most studies on the history of architectural theory have been concerned with what has been said and written this book is concerned with how architecture theory has been created and transmitted Architecture Thinking across Boundaries looks at architectural theory through the lens of intellectual history Eleven original essays explore a variety of themes and contexts each examining how architectural knowledge has been transferred across social spatial and disciplinary boundaries whether through the international circulation of ideas transdisciplinary exchanges or transfers from design practice to theory and back again Dissecting the frictions transformations and resistances that mark these journeys the essays in this book reflect upon the myriad routes that architectural knowledge has taken while developing into architectural theory They critically enquire the interstices geographical temporal and epistemological that lie beyond fixed narratives They show how unstable vital and eminently mobile the processes of thinking about architecture have been

Architecture, Crisis and Resuscitation Tahl Kaminer, 2011-01-20 Studying the relation of architecture to society this book explains the manner in which the discipline of

architecture adjusted itself in order to satisfy new pressures by society. Consequently it offers an understanding of contemporary conditions and phenomena ranging from the ubiquity of landmark buildings to the celebrity status of architects. It concerns the period spanning from 1966 to the first years of the current century, a period which saw radical change in economy, politics and culture, and a period in which architecture radically transformed, substituting the alleged dreariness of modernism with spectacle.

The Chameleon Effect Dietmar Froehlich, 2018-04-09. Architecture and film have many things in common. Film narratives are embedded in scenes that visually support the story. Sometimes architecture even performs the role of an actor. Conversely, film with its multifaceted changing atmospheres reveals new layers of architecture which outside the cinema would remain concealed. In conclusion, film as a mass medium influences the way architecture is perceived and its image in society. Since the beginning of cinema, architecture has formed a symbiosis with film. With its systematic analysis, this book offers a scientifically researched history of mutual influence, starting with filmography as a typology of well-known film sets through to the description of the chameleon effect between film and architecture.

This Thing Called Theory Teresa Stoppani, Giorgio Ponzio, George Themistokleous, 2016-11-10. In the age of post-digital architecture and digital materiality, *This Thing Called Theory* explores current practices of architectural theory, their critical and productive role. The book is organized in sections which explore theory as an open issue in architecture as it relates to and borrows from other disciplines, thus opening up architecture itself and showing how architecture is inextricably connected to other social and theoretical practices. The sections move gradually from the specifics of architectural thought, its history, theory and criticism, and their ongoing relation with philosophy, to the critical positions formulated through architecture's specific forms of expression and onto more recent forms of architecture's engagement and self-definition. The book's thematic sessions are concluded by and interspersed with a series of shorter critical position texts which together propose a new vision of the contemporary role of theory in architecture. What emerges overall is a critical and productive role for theory in architecture today: theory as a proposition, theory as task and as a risk of architecture.

Architecture and Identity Chris Abel, Norman Foster, 2012-10-02. Instead of tuning the consumer to the machine, we can now tune the machine to the consumer. This edited collection of essays, now in its second edition, brings together the author's key writings on the cultural, technological and theoretical developments reshaping Modern architecture into a responsive and diverse movement for the twenty-first century. Chris Abel approaches his subject from a wide range of knowledge, including cybernetics, philosophy, new human science and development planning, as well as his experience as a teacher and critic on four continents. The result is a unique global perspective on the changing nature of Modern architecture at the turn of the millennium. Including two new chapters, this revised and expanded second edition offers radical insights into such topics as the impact of information technology on customized architecture, production, the relations between tradition and innovation, prospects for a global eco-culture, and the local and global forces shaping the architecture and cities of Asia. Chris Abel is an architectural writer and educator based in

Malta He has taught at major universities in the UK North and South America Southeast Asia and the Middle East and is a contributor to numerous international journals and other publications He currently holds visiting appointments at the University of Malta and the University of the Philippines *The Mannerist Mind* Francisco González de Canales,2025-04-01 Departing from a discussion on what it would be a mannerist attitude in the architecture of today and theorizing around it this book analyzes some works of contemporary European practices including Lütjens Padmanabhan architecten de vylder vinck taillieu TEd A Maio 6a architects and AOffice KGDVS Art critics between the seventeenth and nineteenth centuries imprinted a long standing derogatory meaning to the word mannerism Even though scholars such as John Shearman or Wolfgang Lotz rehabilitated the term to a certain degree during the twentieth century it is still uncommon nowadays to find the expression mannerist used without certain pejorative connotations This book provides a contemporary revision of the mannerist attitude for the present creating a framework to analyze and shed light not only on the work that these practices are carrying out but also on the less evident filiations and affinities as well as on their deeper implications Cold War on the Home Front Greg Castillo,2010 Greg Castillo presents an illustrated history of the persuasive impact of model homes appliances and furniture in Cold War propaganda Modern Architecture Graham Livesey,2024-11-15 Modern Architecture The Basics examines technological stylistic socio political and cultural changes that have transformed the history of architecture since the late 18th century Broad definitions of modernity and postmodernity introduce the book which comprises 24 short thematic chapters looking at the concepts behind the development of modern and postmodern architecture These include major historical movements key figures and evolving building typologies There is also an emphasis on the changing city during the 19th and 20th centuries Approaches to representation and its impacts on architecture are studied along with the changing global role of architecture as cultural expression The book introduces new topics including gender race postcolonialism and indigeneity An undaunting contemporary and inclusive account of modern architectural history this is a must read for all students of architecture as well as those outside the discipline approaching the subject for the first time *Utopias and Architecture* Nathaniel Coleman,2007-05-07 Utopian thought though commonly characterized as projecting a future without a past depends on golden models for re invention of what is Through a detailed and innovative re assessment of the work of three architects who sought to represent a utopian content in their work and a consideration of the thoughts of a range of leading writers Coleman offers the reader a unique perspective of idealism in architectural design With unparalleled depth and focus of vision on the work of Le Corbusier Louis I Kahn and Aldo van Eyck this book persuasively challenges predominant assumptions in current architectural discourse forging a new approach to the invention of welcoming built environments and transcending the limitations of both the postmodern and hyper modern stance and orthodox modernist architecture
