Social Regionalism in the Global Economy Adelle Blackett, Christian Lévesque, 2010-12-20 Regional trade agreements have expanded exponentially over the past decade and have become a significant if controversial factor in the expanse of economic globalization Social Regionalism in the Global Economy attempts to take a fresh interdisciplinary approach to addressing labour regulation by drawing upon insights from industrial relations comparative capitalism and new governance schools of thought It stands for the proposition that an interdisciplinary study of regional regulation holds the potential to offer a fuller account of social regionalism Its focus is to consider how institutions and labour market actors reconstruct and renegotiate regulatory space in a changing economic environment characterized by regional impulses It argues that there is a dynamic interplay between institutions and actors of social regulation This interplay occurs at many levels The book therefore maps both how actors shape institutions as well as how institutions shape social actors ability to affect regulatory processes The editors bring together leading international specialists willing to move beyond textual analyses of regional agreements to offer alternative accounts of regional integration The work emphasizes that institutional context and social actors at multiple governance levels are integral to the progressive construction and regulation of regional space It further contributes to the literature by combining insights from overlooked regional entities in transition and developing countries with original analyses from the European Union and the NAFTA These aims will be achieved by combining original research that is empirically grounded with theoretically informed analysis

Multinationals, Global Value Chains and Governance Peter Hertenstein, 2019-08-16 This book uses the examples of local supply firms in China and Brazil and their connections to the global automotive industry to explore the nature of current global value chains It argues that lead firms make use of product architecture to globalize their procurement and supply chain management and that they effectively restructure the global supply base by internationalizing the most capable supply firms thereby creating oligopolies controlled by the lead firm The book goes on to contend that some firms have gained such powerful positions that they have gained a degree of control over other firms without the necessity of ownership altering the mechanics of governance Also it shows how although some supply firms from emerging markets have utilized their business ties with western assembly firms to upgrade themselves within the global value chain most are squeezed out through increased global competition Overall the book makes a major new contribution to the economic theory of governance

A Business and Labour History of Britain M. Richardson, P. Nicholls, 2011-08-31 By bringing together and critically engaging with accounts of certain themes in business and labour history and utilizing original research this book aims to
