ACTIVITY 1 – cheetah and me

The major purpose of this activity is for students to recognize similarities between cheetah cubs and human babies as well as develop mathematic skills.

Procedure

1. Begin discussion with students about cheetahs. Ask them to guess how much a cub (baby cheetah) might weigh when it is born. Students can write down their guess on a piece of paper. Call for their guesses. Ask for their ideas about how long mother cheetahs are pregnant, what baby cheetahs eat when they are born, how much they might weigh when they are a year old, how many brothers and sisters they might have who are their same age, how much they weigh when they are full grown and how long they live.
2. Following discussion, post the Weight and Age Relationships for Cheetahs Chart and provide as a handout found on page 25. Review with students any of the background information not covered in the class discussion. Ask students to plot the cheetah's weight and age.
3. Ask the students to plot their own weight at the same ages as the cheetah shown on the chart. They will be required to estimate for years past their present age. Ask the students to graph both sets of data.
4. Ask the students to compute the following, and include their results with their graph and drawing:
 - A. How much weight did the cheetah gain at each interval, that is, from birth to four months, 12 months to two years, etc.
 - B. How much weight did you gain during the same intervals?
 - C. How many times more weight did the cheetah gain during each period?
5. In discussion, ask the students to comment on the similarities and differences between the lifecycles of cheetahs and people.
