Intelligent Information Processing II Qing He,2006-01-20 Data Mining is the process of posing

queries and extracting useful information patterns and trends previously unknown from large quantities of data Thu 00 It is the process where intelligent tools are applied in order to extract data patterns JM 01 This encompasses a number of different technical approaches such as cluster analysis learning classification and association rules and finding dependencies Agents are defined as software entities that perform some set of tasks on behalf of users with some degree of autonomy This research work deals about developing a automated data mining system which encompasses the familiar data mining algorithms using intelligent agents in object oriented databases and proposing a framework Because the data mining system uses the intelligent agents a new user will be able to interact with the data mining system without much data mining technical knowledge This system will automatically select the appropriate data mining technique and select the necessary field needed from the database at the appropriate time without expecting the users to specify the specific technique and the parameters Also a new framework is proposed for incorporating intelligent agents with automated data mining One of the major goals in developing this system is to give the control to the computer for learning automatically by using intelligent agents **Catalogue** United States Naval Academy,1990 **Nonlinear Aspects of Telecommunications** Andrzej

Borys,2018-10-08 The discrete Volterra series holds particular value in the analysis of nonlinear systems in telecommunications However most books on the Volterra series either do not address this application or only offer a partial discussion Nonlinear Aspects of Telecommunications provides an in depth treatment of the Volterra series and the benefits it offers as a representation of nonlinear problems particularly in echo cancellation in digital telecommunications systems Beginning with the fundamentals of the discrete Volterra series the author presents its basic definition notions conditions for convergence and stability and its matrix representation for multiple input and multiple output nonlinear digital systems He pays significant attention to the important problem of approximating a nonlinear digital system using the discrete Volterra series and offers new results in this area results not yet available in other texts The second part of the book uses the background of Part I to show the Volterra series application to echo cancellation It provides introductory material regarding the basics of adaptive cancellers and analyzes structures for nonlinear echo cancellers using nonlinear transversal filters for baseband transmission The last section covers nonlinear echo cancellers for voiceband transmission and interleaved structures Full of illustrations examples and new results Nonlinear Aspects of Telecommunications is your first and best resource for understanding and applying the discrete Volterra series to nonlinear echo cancellation problems Features

Forthcoming Books Rose Arny,1997 Synthetic Aperture Radar Processing Giorgio Franceschetti,Riccardo Lanari,2018-02-06 Synthetic Aperture Radar Processing simply and methodically presents principles and techniques of Synthetic Aperture Radar SAR image generation by analyzing its system transfer function The text considers the full array of operation modes from strip to scan emphasizes processing techniques enabling the design of operational SAR codes A simple example then follows This book will be invaluable to all SAR scientists and engineers working in the field It may be used as
