Ontology of Communication Roland Hausser, 2023-01-03 The book gives a comprehensive discussion of Database Semantics DBS as an agent based data driven theory of how natural language communication essentially works In language communication agents switch between speak mode driven by cognition internal content input resulting in cognition external raw data e g sound waves or pixels which have no meaning or grammatical properties but can be measured by natural science and hear mode driven by the raw data produced by the speaker resulting in cognition internal content The motivation is to compare two approaches for an ontology of communication agent based data driven vs sign based substitution driven Agent based means design of a cognitive agent with i an interface component for converting raw data into cognitive content recognition and converting cognitive content into raw data action ii an on board content addressable memory database for the storage and content retrieval iii separate treatments of the speak and the hear mode Data driven means a mapping a cognitive content as input to the speak mode into a language dependent surface as output b mapping a surface as input to the hear mode into a cognitive content as output Oppositely sign based means no distinction between speak and hear mode whereas substitution driven means using a single start symbol as input for generating

infinitely many outputs based on substitutions by rewrite rules Collecting recent research of the author this beautiful novel and original exposition begins with an introduction to DBS makes a linguistic detour on subject predicate gapping and slot filler repetition and moves on to discuss computational pragmatics inference and cognition grammatical disambiguation and other related topics The book is mostly addressed to experts working in the field of computational linguistics as well as to enthusiasts interested in the history and early development of this subject starting with the pre computational foundations of theoretical computer science and symbolic logic in the 30s
