**Thermal Dosimetry and Treatment Planning** Michel Gautherie, 2012-12-06 When in the future improved and more flexible heating equipment becomes available and when hyperthermia is applied more routinely computerized simulations of treatments will become commonplace as they are in radiation therapy For hyperthermia however such simulations will be used not only for the traditional role of planning patient treatment but also for three other applications not needed in radiation therapy the comparative evaluation of equipment feedback control during treatment and the post treatment evaluation of therapy The present simulations of hyperthermia are crude and simple when compared with what is required for these future applications a fact which indicates the need for considerable research and development in this area Indeed this research is proceeding rapidly within the hyperthermia community where three dimensional power deposition and temperature calculations have just become available for realistic patient anatomies Of equal significance are the even more rapid development in diagnostic imaging for the determination and display of patient anatomy and blood flow rates information required for the planning of realistic hyperthermia treatment These simulations will be very valuable tools which can be used to great advantage when combined with data obtained from treatments of patients
