The Ecologies of the Building Envelope Alejandro Zaera-Polo, Jeffrey Anderson, 2021-05-11 The Ecologies of the Envelope theorizes the building envelope as a literal embodiment of the social political technological and economic contingencies which have become embedded within it over the last century analyzing the historical lineages heroes and villains that helped define the complex material ecologies we see within the envelope today While the facade is one of the most thoroughly theorized elements of architecture it is also one of the most questioned since the end of the 19th century Within the discipline of architecture the traditional understanding of the facade focuses primarily on semiotic and compositional operations such as proportional laws and linguistic codes which are deployed on the building's surface In contrast to this our material and environmental theory of the envelope proposes that the exponential development of building technologies since the mid 19th century coupled with new techniques of management and regulation have diminished the compositional and ornamental capacities of the envelope in favor of material quantitative and technical performances Rather than producing a stylistic analysis of the facade we investigate the historical lineages of the performances components assembly types and material entanglements that constitute the contemporary building envelope
