**Who's Who in America** Marquis Who's Who, Inc, 2002     Mathematical Reviews , 2004     *Fuzzy Classifier Design* Ludmila Kuncheva, 2014-09-01     **Fuzzy Classifier Design** Ludmila Kuncheva, 2000-04-26 Fuzzy sets were first proposed by Lotfi Zadeh in his seminal paper 366 in 1965 and ever since have been a center of many discussions fervently admired and condemned Both proponents and opponents consider the arguments pointless because none of them would step back from their territory And still discussions burst out from a single sparkle like a conference paper or a message on some fuzzy mail newsgroup Here is an excerpt from an e mail message posted in 1993 to fuzzy mail vexpert dbai twvien ac at by somebody who signed Dave Why then the logic in fuzzy logic I don't think anyone has successfully used fuzzy sets for logical inference nor do I think anyone with In my admittedly neophyte opinion fuzzy logic is a misnomer an oxymoron I would be delighted to be proven wrong on that I came to the fuzzy literature with an open mind and open wallet high hopes and keen interest I am very much disillusioned with fuzzy per se but I did happen across some extremely interesting things along the way Dave thanks for the nice quote Enthusiastic on the surface are not many of us suspicious deep down In some books and journals the word fuzzy is religiously avoided fuzzy set theory is viewed as a second hand cheap trick whose aim is nothing else but to devalue good classical theories and open up the way to lazy ignorants and newcomers     Combining Pattern Classifiers Ludmila I. Kuncheva, 2014-09-09 A unified coherent treatment of current classifier ensemble methods from fundamentals of pattern recognition to ensemble feature selection now in its second edition The art and science of combining pattern classifiers has flourished into a prolific discipline since the first edition of Combining Pattern Classifiers was published in 2004 Dr Kuncheva has plucked from the rich landscape of recent classifier ensemble literature the topics methods and algorithms that will guide the reader toward a deeper understanding of the fundamentals design and applications of classifier ensemble methods Thoroughly updated with MATLAB code and practice data sets throughout Combining Pattern Classifiers includes Coverage of Bayes decision theory and experimental comparison of classifiers Essential ensemble methods such as Bagging Random forest AdaBoost Random subspace Rotation forest Random oracle and Error Correcting Output Code among others Chapters on classifier selection diversity and ensemble feature selection With firm grounding in the fundamentals of pattern recognition and featuring more than 140 illustrations Combining Pattern Classifiers Second Edition is a valuable reference for postgraduate students researchers and practitioners in computing and engineering
