The Physics of Microfabrication Ivor Brodie,Julius J. Muray,2013-11-11 The Physical Electronics Department of SRI International formerly Stanford Research Institute has been pioneering the development of devices fabricated to submicron tolerances for well over 20 years In 1961 a landmark paper on electron beam lithography

and its associated technologies was published by K R Shoulderst then at SRI which set the stage for our subsequent efforts in this field He had the foresight to believe that the building of such small devices was actually within the range of human capabilities As a result of this initial momentum our experience in the technologies associated with microfabrication has become remarkably comprehensive despite the relatively small size of our research activity We have frequently been asked to deliver seminars or provide reviews on various aspects of micro fabrication These activities made us aware of the need for a comprehensive overview of the physics of microfabrication We hope that this book will fill that need
