Geometry Proportion And The Art Of Lutherie:

Geometry, Proportion, and the Art of Lutherie Kevin Coates, 1985 This study explores a controversial aspect of Western musical instrument design establishing beyond question that the familiar stringed instrument outlines developed between the sixteenth and eighteenth centuries were not arbitrary intuitive shapes drawn within acoustically efficient frameworks but were designs following a profoundly considered manipulation of plane geometry and numerical proportion The central core of the work is the detailed step by step design analysis of thirty three important historic instrument examples covering all main categories of stringed musical instruments of the period Geometry, Proportion and the Art of Lutherie Kevin Coates, 1986 Geometry, Proportion and the Art of Lutherie Kevin Coates, 1991 Geometry, **Proportion and the Art of Lutherie** Kevin Coates, 1986 **Geometry and Proportion and the Art of Lutherie** Kevin Coates, 1979 **The Violin** Mark Katz, 2006 This book is the only complete and up to date annotated bibliography available on women's activities and contributions in the creation and performance of music through the ages Encompassing major books articles and recordings published over the past five decades the book examines a broad cross section of contemporary thought with each entry with over 500 devoted to resources from countries outside the US including annotation along with a critical description of content The Subtext of Form in the English Renaissance S. K. Heninger, 1994 During the sixteenth century in England the logocentrism of the Middle Ages was confronted by a materialism that heralded the modern world With remarkable tenacity in music poetry and painting the orthodox aesthetic persisted as formal features which served as nonverbal signs and provided a subtext of form In opposition however a radical aesthetic emerged to accommodate the new attention to physical nature The growing force of materialism occasioned a fundamental rethinking of what an artifact might represent and how that representation might be achieved This book explores the ontological and epistemological issues that poststructuralist thought raises about that shift in our cultural history In doing so it charts a course for Renaissance studies now in disarray that avoids the old positivism while not succumbing to the new nihilism

Levin, 2009-04-27 In this book Flora Levin explores how and why music was so important to the ancient Greeks She examines the distinctions that they drew between the theory of music as an art ruled by number and the theory wherein number is held to be ruled by the art of music These perspectives generated more expansive theories particularly the idea that the cosmos is a mirror image of music s structural elements and conversely that music by virtue of its cosmic elements time motion and the continuum is itself a mirror image of the cosmos These opposing perspectives gave rise to two opposing schools of thought the Pythagorean and the Aristoxenian Levin argues that the clash between these two schools could never be reconciled because the inherent conflict arises from two different worlds of mathematics Her book shows how the Greeks appreciation of the profundity of music s interconnections with philosophy mathematics and logic led to groundbreaking intellectual achievements that no civilization has ever matched
