In 2009 Ron and June worked with their oldest grandson Trey to add structure into his life that would allow him to control the negative characteristics of Attention Deficit Disorder ADD including distractibility inattention impulsivity and restlessness While researching ADD Ron was introduced to the positive characteristic of HYPERFOCUS This allows people with ADD to focus intently with passion creativity and enthusiasm on things they are interested in Ron also realized that the tools and structure he has spent his entire career teaching to others were all based on the same principles needed by people with ADD They require permanent structure and perhaps medication to overcome the negative characteristics and benefit from the positive characteristic of Hyperfocus and creativity Setting long term goals for 15 years out Breaking these goals down into 3 year increments Setting goals for the current year by months Preparing a calendar for the current month Preparing a To Do list for what has to be done today Becoming motivated and focused on the To Do list in order of priority knowing that you will be successful in reaching your life goals and dreams *Fair Winds and Following Seas* Ronald Vail,2013-04 This book relates the military experiences compiled from a twenty five year naval career of a small town boy whose elementary and high school endeavors were somewhat less than satisfactory but who was given the opportunity provided by that inconceivably destructive event known as World War II to redeem his poor educational activity and serve in the Navy reasonably successfully The book follows his career as he rose from a very young and inexperienced Ensign to the rank of Commander Early on he acquired a specialty designation as cryptologist dealing with codes and ciphers in the Naval Communications system This book depicts the good times the hard times and the difficult times of the voyage to the top of the military organization in which he spent the biggest part of his Navy career He spent many years in the field spreading the communication security gospel directly to the communication officers of various ships and stations Finally after 20 years of total service he was assigned to the Naval Security Group Headquarters in Washington D C as deputy to the head of the Communication Security Organization with oversight and management responsibilities over the field activities Later when his boss was assigned to duty at a field activity he was elevated to the head of the organization After about a year as head of the Communication Security Organization he was given a very promising assignment as Commanding Officer of a newly established Naval Security Group command in California As expressed in the book this was a Camelot assignment Shortly after World War II ended and very early in his career he met and married his lifetime companion This relationship produced six children five daughters and a son who survived a change of venue every two to three years and all became college graduates including one daughter who was born with a physical disability denying her the ability to get around without assistance All achieved exceptional success in their chosen occupational pursuits He and his bride s commandment that all the children must expect to stay in school at least sixteen years was really very rewarding for them in their later lives The book concludes with a comparison of his Navy life with the famous and well used Navy description of a hypothetically perfect sea voyage *Fair Winds and Following Seas* **The University of Idaho Bulletin** University of Idaho,1906

Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

An Unbounded Experience In Random Walks With Applications Michael F Shlesinger, 2021-06-29 This volume comprises the author's account of the development of novel results in random walk theory and its applications during the fractal and chaos revolutions The early history of probability is presented in an engaging manner and peppered with pitfalls and paradoxes Readers will find the introduction of Paul Levy's work via Mandelbrot's Levy flights which are featured uniquely as Weierstrass and Riemann random walks Generalizations to coupled memories internal states and fractal time are introduced at the level for graduate students Mathematical developments are explained including Green's functions inverse Mellin transforms Jacobians and matrix methods Applications are made to anomalous diffusion and conductivity in amorphous semiconductors and supercooled liquids The glass transition is discussed especially for pressure effects All along the way personal stories are recounted and special appreciations are made to Elliott Montroll and Harvey Scher for their ever expanding influence on the field of non equilibrium anomalous processes that now are found in topics including disordered materials water table processes animal foraging blinking quantum dots rotating flows optical lattices dynamical strange attractors and strange kinetics
