**(eIT-2007)** Amol C. Goje, Pravin L. Yannawar, 2013-12-30 Information Technology skill standards provide a common language for industry and education. It provides increased portability depending on attitude and performance of the professionals. The industry recognizes IT education programs that build competency among the students to perform the best in the new emerging trends in Information Technology like Human Computer Interactions, Biometrics, Bioinformatics, Signal Processing. So this conference is organized to bring together leading academicians, industry experts and researchers in the area of emerging trends in Information Technology and facilitate personal interaction and discussions on various aspects of Information Technology. It also aims to provide a platform for the post graduate students and research students to express their views about the emerging trends in Information Technology with interaction and exchange of ideas among the researchers and students from all over India. With this focus, Technical research papers are invited from the students of MCA, M Sc CS, M Sc IT, MCM and research students on the following topics: Biometrics, Data Communication and Security, Digital Image and Image Processing, Human Computer Interaction, Internet Technologies and Service Oriented Architecture, Artificial Intelligence and Its Applications. *Video and Image Processing in Multimedia Systems* Borko Furht, Stephen W. Smoliar, HongJiang Zhang, 2012-12-06 *Video and Image Processing in Multimedia Systems* treats a number of critical topics in multimedia systems with respect to image and video processing techniques and their implementations. These techniques include Image and video compression techniques and standards and Image and video indexing and retrieval techniques. *Video and Image Processing in Multimedia Systems* is divided into three parts. Part I serves as an introduction to multimedia systems, discussing basic concepts, multimedia networking and synchronization and an overview of multimedia applications. Part II presents comprehensive coverage of image and video compression techniques and standards, their implementations and applications. Because multimedia data, specifically video and images, require efficient compression techniques in order to be stored and delivered in real time, video and image compression is a crucial element of an effective multimedia system. In Part III, attention is focused on the semantic nature of image and video source material and how that material may be effectively indexed and retrieved. Topics discussed include static images, full motion video and the manner in which compressed representations can facilitate structural analysis. Part III concludes with an extended discussion of a case study. This book serves as an invaluable reference with respect to the most important standards in the field. *Video and Image Processing in Multimedia Systems* is suitable as a textbook for course use. *Introduction to Computer Science* I. T. L. Education Solutions Limited, IIT Esl, 2004-09 *Principles of Multimedia* Ranjan Parekh, 2025-06-30 *Principles of Multimedia* introduces and explains the theoretical concepts related to the representation, storage, compression, transmission and processing of various multimedia components including text, image, graphics, audio, video and animation as well as their use across various applications. The book provides the necessary programming tools and analysis technique concepts to perform practical processing tasks in software labs and to solve numerical problems at the postgraduate level. For this new third
