### **Introduction**

Plate tectonics is the theory of the movement of the Earth's crust. It is a theory that explains how the plates move, diverge, converge, and transform. The theory is based on the fact that the Earth's crust is made of large pieces of rock called plates. These plates are constantly moving, and their movement is caused by the forces of the mantle. The theory of plate tectonics is a key concept in geology, and it helps us understand the Earth's history and the processes that shape our planet.

The first part of the theory of plate tectonics is the concept of the plates. The plates are large pieces of the Earth's crust that are constantly moving. They are separated by boundaries, and their movement is caused by the forces of the mantle. ### **Diagram**

The diagram shows the three basic types of plate boundaries: divergent, convergent, and transform. Divergent boundaries are where plates move apart, convergent boundaries are where plates move together, and transform boundaries are where plates slide past each other. The diagram also shows the forces that drive plate tectonics, such as the mantle convection and the slab pull.
