GEOLOGY

Geology, from the Greek *geo* ("Earth") and *logos* ("study"), is the scientific study of the origin, history, and structure of the Earth.

GEOLOGIC TIME

Geology is a science that studies the formation of the Earth's features, following a **geologic time scale**. This scale is the dividing line between the past and the present. Geologists have divided geologic time into **eras**, **periods**, **epochs**, **ages**, and **years**.

- The boundaries on the geologic time scale are not always exact, but have been established by the rock record. For example, the boundary between the Cenozoic and Paleozoic eras is marked by the first appearance of the **Permian-Triassic boundary** for the Cenozoic and the **Permian-Triassic boundary** for the Paleozoic.

RELATIVE AGE

Relative age is the age of a rock or fossil, and is determined by the position of the rock or fossil in the rock record.

- Relative** The relative age of a rock or fossil is determined by its position in the rock record. The rock record is the sequence of rock layers that have been deposited over time. The relative age of a rock or fossil is determined by its position in the rock record.
 - Principle of superposition** The oldest layer of rock is at the bottom, and the youngest layer is at the top.
 - Principle of original horizontality** Sediments are deposited in horizontal layers.
 - Principle of uniformitarianism** The same geological processes that operate today have operated in the past.
- Geological** The geological time scale is a sequence of geological time periods. The geological time scale is a sequence of geological time periods.

ABSOLUTE AGE

Technological advances have given scientists the means to determine **absolute age**—that is, the actual age in years of the rock or fossil. The absolute age of a rock or fossil is determined by the half-life of a radioactive isotope. The half-life of a radioactive isotope is the time it takes for half of the isotope to decay.

- Relative** The relative age of a rock or fossil is determined by its position in the rock record. The relative age of a rock or fossil is determined by its position in the rock record.

THE EARTH'S SPHERES

The Earth is divided into four main spheres: the **geosphere**, the **hydrosphere**, the **atmosphere**, and the **biosphere**.

- Geosphere** The geosphere is the solid part of the Earth. It includes the crust, the mantle, and the core.
- Hydrosphere** The hydrosphere is the water part of the Earth. It includes the oceans, the lakes, the rivers, and the atmosphere.
