

The image shows the front cover of an old book. The cover is made of a light-colored, textured material, possibly parchment or aged paper, which shows signs of wear and discoloration. On the left side, there is a vertical strip of dark, patterned material, likely a decorative binding or spine reinforcement, featuring a repeating floral or foliate design. In the center of the cover, the title is printed in a black, serif font, enclosed within a simple black rectangular border. The title is arranged in three lines: 'Geometrical', 'solutions derived', and 'from mechanics'. Below the title, the subtitle 'A treatise of Archimedes' is printed in a smaller, similar serif font, also centered.

from Mechanics J. L. Heiberg,2015-06-29 Excerpt from Geometrical Solutions Derived From Mechanics A Treatise of Archimedes If there ever was a case of appropriateness in discovery the finding of this manuscript in the summer of 1906 was one In the first place it was appropriate that the discovery should be made in Constantinople since it was here that the West received its first manuscripts of the other extant works nine in number of the great Syracusan It was furthermore appropriate that the discovery should be made by Professor Heiberg facilis princeps among all workers in the field of editing the classics of Greek mathematics and an indefatigable searcher of the libraries of Europe for manuscripts to aid him in perfecting his labors And finally it was most appropriate that this work should appear at a time when the affiliation of pure and applied mathematics is becoming so generally recognized all over the world We are sometimes led to feel in considering isolated cases that the great contributors of the past have worked in the field of pure mathematics alone and the saying of Plutarch that Archimedes felt that every kind of art connected with daily needs was ignoble and vulgar may have strengthened this feeling It therefore assists us in properly orientating ourselves to read another treatise from the greatest mathematician of antiquity that sets clearly before us his indebtedness to the mechanical applications of his subject About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Geometrical Solutions Derived From Mechanics** David Eugene Smith Johan Ludvig
