Pangeometry Nikolai Ivanovich Lobachevskii, 2010 Lobachevsky wrote Pangeometry in 1855 the year before his death This memoir is a resume of his work on non Euclidean geometry and its applications and can be considered his clearest account on the subject It is also the conclusion of his life s work and the last attempt he made to acquire recognition The treatise contains basic ideas of hyperbolic geometry including the trigonometric formulae the techniques of computation of arc length of area and of volume with concrete examples It also deals with the applications of hyperbolic geometry to the computation of new definite integrals The techniques are different from those found in most modern books on hyperbolic geometry since they do not use models Besides its historical importance Lobachevsky s Pangeometry is a beautiful work written in a simple and condensed style The material that it contains is still very alive and reading this book will be most useful for researchers and for students in geometry and in the history of science It can be used as a textbook as a sourcebook and as a repository of inspiration The present edition provides the first complete English translation of Pangeometry available in print It contains facsimiles of both the Russian and the French original versions The translation is accompanied by notes followed by a biography of Lobachevsky and an extensive commentary
