Marco Bramanti, Luca Brandolini, Maria Manfredini, Marco Pedroni, 2017-09-25 The authors consider operators of the form in a bounded domain of where are nonsmooth Hormander's vector fields of step such that the highest order commutators are only Hölder continuous Applying Levi's parametrix method the authors construct a local fundamental solution for and provide growth estimates for and its first derivatives with respect to the vector fields Requiring the existence of one more derivative of the coefficients the authors prove that also possesses second derivatives and they deduce the local solvability of

constructing by means of a solution to with Hölder continuous The authors also prove estimates on this solution **Moving**

with Quasi-Periodic Potential in Dimension Two Yulia Karpeshina, Roman Shterenberg, 2019-04-10 The authors consider a Schrödinger operator H_V in dimension two with a quasi periodic potential V They prove that the absolutely continuous spectrum of H contains a semiaxis and there is a family of generalized eigenfunctions at every point of this semiaxis with the following properties First the eigenfunctions are close to plane waves $e^{i x}$ in the high energy region Second the isoenergetic curves in the space of momenta corresponding to these eigenfunctions have the form of slightly distorted circles with holes Cantor type structure A new method of multiscale analysis in the momentum space is developed to prove these results The result is based on a previous paper on the quasiperiodic polyharmonic operator Δ_V Here the authors address technical complications arising in the case Δ_V However this text is self contained and can be read without familiarity with the previous paper **Lasers in Endodontics**
