Ensuring the Integrity, Accessibility, and Stewardship of Research Data in the Digital Age Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Committee on Science, Engineering, and Public Policy, Committee on Ensuring the Utility and Integrity of Research Data in a Digital Age, 2009-11-17 As digital technologies are expanding the power and reach of research they are also raising complex issues These include complications in ensuring the validity of research data standards that do not keep pace with the high rate of innovation restrictions on data sharing that reduce the

ability of researchers to verify results and build on previous research and huge increases in the amount of data being generated creating severe challenges in preserving that data for long term use Ensuring the Integrity Accessibility and Stewardship of Research Data in the Digital Age examines the consequences of the changes affecting research data with respect to three issues integrity accessibility and stewardship and finds a need for a new approach to the design and the management of research projects The report recommends that all researchers receive appropriate training in the management of research data and calls on researchers to make all research data methods and other information underlying results publicly accessible in a timely manner The book also sees the stewardship of research data as a critical long term task for the research enterprise and its stakeholders Individual researchers research institutions research sponsors professional societies and journals involved in scientific engineering and medical research will find this book an essential guide to the principles affecting research data in the digital age

Biological Collections National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Life Sciences, Committee on Biological Collections: Their Past, Present, and Future Contributions and Options for Sustaining Them, 2021-01-29 Biological collections are a critical part of the nation's science and innovation infrastructure and a fundamental resource for understanding the natural world Biological collections underpin basic science discoveries as well as deepen our understanding of many challenges such as global change biodiversity loss sustainable food production ecosystem conservation and improving human health and security They are important resources for education both in formal training for the science and technology workforce and in informal learning through schools citizen science programs and adult learning However the sustainability of biological collections is under threat Without enhanced strategic leadership and investments in their infrastructure and growth many biological collections could be lost Biological Collections Ensuring Critical Research and Education for the 21st Century recommends approaches for biological collections to develop long term financial sustainability advance digitization recruit and support a diverse workforce and upgrade and maintain a robust physical infrastructure in order to continue serving science and society The aim of the report is to stimulate a national discussion regarding the goals and strategies needed to ensure that U S biological collections not only thrive but continue to grow throughout the 21st century and beyond **H.R.**

A Vision for NSF Earth Sciences 2020-2030 National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Catalyzing Opportunities for Research in the Earth Sciences (CORES): A Decadal Survey for NSF's Division of Earth Sciences, 2020-07-31 The Earth system functions and connects in unexpected ways from the microscopic interactions of

bacteria and rocks to the macro scale processes that build and erode mountains and regulate Earth's climate. Efforts to study Earth's intertwined processes are made even more pertinent and urgent by the need to understand how the Earth can continue to sustain both civilization and the planet's biodiversity. A Vision for NSF Earth Sciences 2020-2030: Earth in Time provides recommendations to help the National Science Foundation plan and support the next decade of Earth science research focusing on research priorities, infrastructure and facilities, and partnerships. This report presents a compelling and vibrant vision of the future of Earth science research. *New Research Opportunities in the Earth Sciences* National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on New Research Opportunities in the Earth Sciences at the National Science Foundation, 2012-04-26. The 2001 National Research Council NRC report Basic Research Opportunities in Earth Science (BROES) described how basic research in the Earth sciences serves five national imperatives: 1. discovery, use and conservation of natural resources; 2. characterization and mitigation of natural hazards; 3. geotechnical support of commercial and infrastructure development; 4. stewardship of the environment; and 5. terrestrial surveillance for global security and national defense. This perspective is even more pressing today and will persist into the future with ever growing emphasis. Today's world, with headlines dominated by issues involving fossil fuel and water resources, earthquake and tsunami disasters claiming hundreds of thousands of lives and causing hundreds of billions of dollars in damages, profound environmental changes associated with the evolving climate system, and nuclear weapons proliferation and testing, has many urgent societal issues that need to be informed by sound understanding of the Earth sciences. A national strategy to sustain basic research and training of expertise across the full spectrum of the Earth sciences is motivated by these national imperatives. *New Research Opportunities in the Earth Sciences* identifies new and emerging research opportunities in the Earth sciences over the next decade, including surface and deep Earth processes and interdisciplinary research with fields such as ocean and atmospheric sciences, biology, engineering, computer science, and social and behavioral sciences. The report also identifies key instrumentation and facilities needed to support these new and emerging research opportunities. The report describes opportunities for increased cooperation in these new and emerging areas between EAR and other government agency programs, industry, and international programs, and suggests new ways that EAR can help train the next generation of Earth scientists, support young investigators, and increase the participation of underrepresented groups in the field. *Digital Mapping Techniques '03, Workshop Proceedings* David R.
