Reisner,T. Pradeep,2014-09-24 The world s fresh water supplies are dwindling rapidly even wastewater is now considered an asset By 2025 most of the world s population will be facing serious water stresses and shortages Aquananotechnology Global Prospects breaks new ground with its informative and innovative introduction of the application of nanotechnology to the remediation of contaminated water for drinking and industrial use It provides a comprehensive overview from a global perspective of the latest research and developments in the use of nanotechnology for water purification and desalination methods The book also covers approaches to remediation such as high surface area nanoscale media for adsorption of toxic species UV treatment of pathogens and regeneration of saturated media with applications in municipal water supplies produced water from fracking

ballast water and more. It also discusses membranes, desalination, sensing, engineered polymers, magnetic nanomaterials, electrospun nanofibers, photocatalysis, endocrine disruptors, and Al₁₃ clusters. It explores physics-based phenomena such as subcritical water and cavitation-induced sonoluminescence and fog harvesting. With contributions from experts in developed and developing countries, including those with severe contamination such as China, India, and Pakistan, the book's content spans a wide range of the subject areas that fall under the aquanotechnology banner, either squarely or tangentially. The book strongly emphasizes sorption media with broad application to a myriad of contaminants, both geogenic and anthropogenic, keeping in mind that it is not enough for water to be potable; it must also be palatable.

Craig's Soil Mechanics Jonathan Knappett, R.F. Craig, 2019-10-11. Craig's Soil Mechanics continues to evolve and remain the definitive text for civil engineering students worldwide. It covers fundamental soil mechanics and its application in applied geotechnical engineering from A to Z and at the right depth for an undergraduate civil engineer, with sufficient extension material for supporting MSc level courses and with practical examples and digital tools to make it a useful reference work for practising engineers. This new edition now includes Restructured chapters on foundations and earthworks, the latter including new material on working platforms and collapse of underground cavities, sinkhole formation. New mobilised stress-based deformation methods that can straightforwardly be used with both linear and non-linear soil stiffness models and field measurements of shear wave velocity for serviceability limit state design. Extended sets of correlations for making sensible first estimates of soil parameters, adding deformation-based parameters for broader coverage than the Eighth Edition. Extended section on robust statistical selection of characteristic soil parameters. Greater use of consolidation theory throughout in determining whether actions, processes, and laboratory in situ tests are drained or undrained. Extended chapter on in situ testing, adding the Flat Dilatometer Test (DMT) and interpretation of consolidation parameters from CPTU and DMT testing. An updated section on pile load testing. Additional worked examples and end-of-chapter problems covering new material with fully worked solutions for lecturers. The electronic resources on the book's companion website are developed further with the addition of two new spreadsheet numerical analysis tools and improvement of existing tools from the Eighth Edition. Using these, readers can take real soil test data, interpret its mechanical properties, and apply these to a range of common geotechnical design problems at ultimate and serviceability limiting states.

The Hydraulic Transport and Storage of Extractive Waste Mike Cambridge, 2018-01-18. This book offers the guidelines on long-term confinement of fine particulate waste products in a safe and environmentally acceptable location. It seeks to present the state of the art, drawing on combined experience from within the European Union (EU) on good international practice where relevant, and on lessons learnt from recent untoward incidents. These guidelines have been developed in parallel with the development of the European Standard on Earthworks prEN 16907, and the contents have been influenced by the well-publicised need for guidance to all stakeholders on both technical and regulatory aspects of the permitting, design, and construction of extractive

waste facilities in Europe The Extractive Waste Directive EWD imposes a duty on all operators and regulators to ensure the competent design operation and closure of such facilities However though some guidance has been published on a limited number of related technical elements the relevance of these contributions has been diminished by the lack of an integrated approach It is now evident to both regulatory bodies and operators alike that a unified and comprehensive document providing guidance to all stakeholders is required if the future of mining within the EU is to be assured and further untoward incidents avoided These guidelines seek to address all technical stages of the development of a hydraulic fill project in the context of the EWD with an emphasis on waste and facility characterisation and on the risk based assessments which underwrite them They are intended for use by all stakeholders involved in those European industries which involve the generation transport and storage of fine particulate waste products requiring long term confinement in a safe stable and environmentally acceptable location
