Dredging Research Technical Notes

GEOtechnical SITE Investigation Methods (GEOSITE)

Purpose

This technical note describes a knowledge-based expert system (KBES) computer program, "GEOtechnical SITE Investigation Methods" (GEOSITE), which was developed as part of the U.S. Army Engineer Waterways Experiment Station's (WES) Dredging Research Program. GEOSITE is intended to provide guidance to geotechnical engineers, engineering geologists, and others in the selection of sampling and testing equipment for use at a single exploration site during a subsurface investigation for a dredging project.

Background

DTIC QUALITY INVESTIGATED 2

Geotechnical engineers plan and execute site investigations for a dredging project. Dredging project subsurface investigations differ in many respects from the typical foundation engineering investigation. Turnovers in personnel, or changes in their assignments, mean that geotechnical engineers who are inexperienced in dredging works can become involved in the subsurface investigation. The knowledge of the more experienced geotechnical engineers is often not adequately transferred and is usually lost on retirement or position change. There is a continuing need for guidance and training of those persons lacking experience in the dredging-related investigations. For this reason, it is desirable to retain expertise and make it available for use by the less experienced workers.

Expert systems are computer programs capable of providing the necessary vehicle for recording the accumulated knowledge and experiences of experts, in any specific discipline, in a knowledge base and providing for interaction between the user and the knowledge base. Inexperienced personnel can learn from the guidance program. Also, knowledgeable and experienced personnel can benefit from consultation with their peers for review and as a check of their own work.

site conditions and presents the procedures to derive design parameters based on interpretation of test results Recent developments in specialized site characterization methods such as seismic hazard evaluation are also included Three recent case histories are presented where site characterization played a key role The three disparate cases include soft natural soil under static loading coarse and fine grained soil under seismic impact and hazardous waste deposits under both static and seismic loading Site investigation requirements of building codes are discussed and guidelines for preparing a typical site characterization report are presented The book is aimed at the practicing geotechnical engineer as well as advanced undergraduate and graduate students
