New Architecture in Wood Marc Wilhelm Lennartz, Susanne Jacob-Freitag, 2015-11-27 Timber the old raw material and building material returns There are many reasons today for building with wood and there are great advantages over conventional designs Wood is not only a renewable building material that helps reduce the levels of CO₂ and is hence good for climate change but due to modern computing and manufacturing processes it can also be used for a variety of construction tasks Wood possesses excellent qualities for both construction and indoor climate control and can easily be combined with other common building materials Based on 24 international projects the book provides an overview of the range of possibilities in wood construction today Texts images and plans document the architectural and constructive qualities of contemporary timber structures from the conceptual design to the structure in detail The various uses are based on current research in modern timber engineering but also on timber construction expertise that has been developing over many centuries This special discipline has evolved significantly in recent decades particularly in Germany Austria and Switzerland and is a world leader today

Architectural Detailing Edward Allen, Patrick Rand, 2016-03-14 The industry standard guide to designing well performing buildings Architectural Detailing systematically describes the principles by which good architectural details are designed Principles are explained in brief and backed by extensive illustrations that show you how to design details that will not leak water or air will control the flow of heat and water vapor will adjust to all kinds of movement and will be easy to construct This new third edition has been updated to conform to International Building Code 2012 and incorporates current knowledge about new material and construction technology Sustainable design issues are integrated where relevant and the discussion includes reviews of recent built works that extract underlying principles that can be the basis for new patterns or the alteration and addition to existing patterns Regulatory topics are primarily focused on the US but touch on other jurisdictions and geographic settings to give you a well rounded perspective of the art and science of architectural detailing In guiding a design from idea to reality architects design a set of details that show how a structure will be put together Good details are correct complete and provide accurate information to a wide variety of users By demonstrating the use of detail patterns this book teaches you how to design a building that will perform as well as you intend Integrate appropriate detailing into your designs Learn the latest in materials assemblies and construction methods Incorporate sustainable design principles and current building codes Design buildings that perform well age gracefully and look great Architects understand that aesthetics are only a small fraction of good design and that stability and functionality require a deep understanding of how things come together Architectural Detailing helps you bring it all together with a well

fleshed out design that communicates accurately at all levels of the construction process SU+RE John Nastasi, Ed May, Clarke Snell, 2018-04-02 In the 21st century architects and engineers are being challenged to produce work that is concurrently sustainable and resilient Buildings need to mitigate their impact on climate change by minimising their carbon footprint while also countering the challenging new weather conditions Globally severe storms extreme droughts and rising sea levels are becoming an increasingly reoccurring feature To respond a design process is required that seeks to integrate resiliency by building in the capacity to absorb the impacts of these disruptive events and adapt over time to further changes while simultaneously being part of the solution to the problem itself This issue of AD is guest edited by the interdisciplinary team at Stevens Institute of Technology who developed the winning entry for the 2015 US Department of Energy Solar Decathlon competition the SU RE House While particular focus is paid to this student designed and built prototype home the publication also provides a broader discussion of the value of design build as a model for tackling the issue of integrating sustainability and resilience and what changes are required across education policy practice and industry for widespread implementation Contributors include Bronwyn Barry Michael Bruno Alex Carpenter Adam Cohen Ann Holtzman Ken Levenson Brady Peters Terri Peters Karin Stieldorf Alex Washburn Claire Weisz and Graham Wright Featured architects 3XN GXN FXFOWLE Architects Local Office Landscape Architecture LOLA Lateral Office Skidmore Owings Merrill SOM Snohetta Structures Design Build and WXY Studio **Wood Design & Building**, 2000 Constructing Architecture Andrea Deplazes, 2005-07-25 Now in its second edition the trailblazing introduction and textbook on construction includes a new section on translucent materials and an article on the use of glass **Illustrated Guide to the International Plumbing & Fuel Gas Codes** Howard C. Massey, 2002-07 Packed with plumbing isometrics and helpful illustrations this guide makes clear the code requirements for installing materials for plumbing and gas systems Includes code tables for pipe sizing and fixture units and code requirements for just about all areas of plumbing from water supply and vents to sanitary drainage systems Covers the principles and terminology of the code how the various systems work and are regulated and code compliance issues you ll likely encounter on the job **Building Automation and Digital Technologies** Shahryar Habibi, 2022-03-17 Building automation systems and digital technologies are highly relevant for the environmental and energy performance of buildings However a clear gap remains between architectural engineering and the use of such technologies Building Automation and Digital Technologies shows how to assimilate automation and digital technologies into making buildings smarter and more environmentally sustainable This book shows why architects need smart and digital systems in building design and construction and promotes innovative technological tools for improving sustainability It focuses on the development of automated environmental conditions and how new technology informs architectural engineering The book also provides new evidence on the impact of building automation systems and digital technologies such as the Internet of Things artificial intelligence and information and communication technology for developing a performance

based approach to the environmental sustainability of buildings and provides a key reference for architects on how digital technology can inform their practice Its four chapters cover developing strategies for improving sustainable and smart buildings architectural practice and construction technology creativity and innovation in building automation systems and the use phase of buildings Building Automation and Digital Technologies meets a critical need for a sustainable and smart built environment from an architectural perspective providing an important reference to architects and professionals in related fields by demonstrating the assimilation of the latest information and automation technologies Puts forward an architectural perspective on the design and construction of smart sustainable buildings Presents the use of digital technologies for design and construction Bridges the gap between architectural engineering and the use of automation and digital technology Considers the development of automated environmental conditions and new technology
